GES 103: Government, Society and Economy — Exam Summary

Covers: Introduction, Chapters 3, 4, 7, 8, 10, 12, 13, 14 *(Chapters 1, 2, 5, 6, 9, 11 excluded as requested.)*
Source: *GES 103 Textbook* (Centre for General Studies, University of Ibadan, Ibadan University Press, 2019).

> **How to use:** Each chapter has (1) key definitions, (2) the core content in point form, (3) names/dates/numbers worth memorising, and (4) likely exam questions. 🔑 = high-probability exam fact.

INTRODUCTION — The Object and Nature of the Social Sciences (A.S. Jegede)

Definitions of Social Science

- **Social science** = the study of human relationships within the socio-cultural environment. 🔑
- **Charles Beard:** body of knowledge and thought pertaining to **human affairs** as distinguished from **sticks, stones, stars and physical objects** (Kochhar 1984). 🔑
- **James High:** bodies of learning that recognise the **simultaneous and mutual action of physical and non-physical stimuli** which produce social reaction (Singh 2008).
- **Hunt and Colander (2008):** simply "the **study of human relations**".
- Components of social behaviour studied: economic, political, cultural behaviour, traditions, customs, social institutions, religious faiths, ethical/value patterns.

Evolution

- Social science is a **product of the 18th century** and became a field of study in higher institutions. 🔑
- A **by-product of modernisation, industrialisation, renaissance, urbanisation, growth of science** (Barker 1967; Ross 1991).
- Historical triggers: Renaissance (Italy & Europe), **American War of Independence 1776**, **French Revolution 1789**, **Industrial Revolution (from 1767)**, new forms of capitalism.
- Developed as a response to the need to **understand modernity** (Ross 1991).
- Exemplary founding texts 🔑:
- **Montesquieu** – *Spirit of the Laws* (**1748**)
- **Adam Smith** – *Wealth of Nations* (**1776**)
- **Condorcet** – *Outline of an Historical View of the Progress of the Human Mind* (**1795**)
- **J.G. Herder** – *Ideas towards a Philosophy of History* (**1784–91**)
- Industrialisation brought problems (disease, alienation, worker exploitation); science brought germ warfare, atomic weapons, hazardous chemicals. Today: **climate change → desertification in northern Nigeria → communal conflicts** over shrinking land.

What is "scientific" about Social Science?

- Social science = **disciplined and systematic study** of society, its institutions, and how/why people behave as individuals and groups (Hargittai 2009).
- To be scientific: **systematic, stepwise** knowledge acquisition; knowledge must be **verifiable** and open to verification at all times, meeting standards of the scientific community.
- Difference from hard sciences: variables in hard sciences can be held constant, but humans change → hence the use of **"ceteris paribus"** = "**all things being equal**" (Galavotti 2003). 🔑
- Critics (Gareau 1987): society is not susceptible to scientific study.
- 🔑 Example: In the early **1980s the British Government renamed the Social Science Research Council** to the **Economic and Social Research Council** → "if it's social it can't be scientific!" (**Halloran 1998**).

Scope of Social Science

- As wide as the discipline; concerned with human relations; a product of history and development.
- Uses knowledge of the past to build **development models** for human welfare.
- Studies **man-made institutions** (family, marriage, politics, economy) which regulate behaviour — "the freedom of an individual ends where another's begins".
- Transmits **societal values** across generations; enables prediction of behaviour related to new technologies (e.g. **cybercrime**); studies **internationalism/globalisation**.

Why Study Social Science?

- Solves practical problems — social, economic, political, health.
- Most health problems are products of human behaviour (e.g. **HIV** in Africa/Asia, late 1990s–2000s) → reason **UI introduced GES 107** (HIV causes, prevention, management). 🔑
- Develops efficient **citizens of democracy**, forms social character, aids moral progress, institution/community development, **international viewpoint**, decision making.

Objectives of Social Science

- Provides knowledge of natural and social environment; develops human qualities via education, learning and socialisation; makes learners know their duties to society.
- Develops **imagination, critical thinking, reasoning**; desirable attitudes; ability to **compare, analyse, summarise, evaluate**.
- Develops personality, **cooperation, morality, universal brotherhood** — "the hallmark of the Ibadan School of Social Sciences".

The Ibadan School of Social Sciences (IBSSS) 🔑

- Began with the **Department of Economics in 1958**.
- **Geography** started earlier (**1948**) but sat in Arts and Science until it joined Social Sciences in **1967**.
- Genealogy: **Political Science grew out of Economics → Sociology out of Political Science → Law and Psychology out of Sociology.**
- The Faculty has **six departments**. Two faculties grew out of it: **Faculty of Economics** and **Faculty of Environmental Design and Management**.
- IBSSS has **"decolonised"** social theory — universal methods but **culturally relevant** curriculum.

Conclusion

- Social scientists must detach from **common sense** ("person on the street") but not so detached that they impose the **expert's perspective** → must be **objective**.

Likely questions: Define social science (any 2 scholars); events that gave rise to social science; meaning of *ceteris paribus*; why social science is "scientific"; history of IBSSS; objectives of social science.

CHAPTER 3 — Political Socialisation and Political Participation (I. Johnson & A.L. Alabi)

Key Definitions

- **Socialisation:** process whereby an individual learns to adjust to a group/society and behave in a manner approved by it; a lifelong process (Encyclopaedia Britannica 2010).
- **Political socialisation:** the **deliberate inculcation of political information, values and practices** by instructional agents formally and informally saddled with that responsibility. 🔑
- **Almond & Powell (1992):** "all political learning, formal and informal, deliberate and unplanned, at every stage of the developmental cycle..." including non-political learning that affects political behaviour.
- **Basic hypothesis:** no political system can attain/remain integrated unless members share **political knowledge, values and attitudes** → political socialisation is a means of building **political cohesion**. 🔑

Content of Political Socialisation

- Its intent/content is the **political culture**. 🔑
- **Gabriel Almond (Almond & Coleman 1960:27):** "Political socialisation is the process of **induction into the political culture**. Its end product is a set of **attitudes, cognitions, value standards and feelings** towards the political system, its roles and role incumbents."
- Political action is determined by **objective situations** and **predispositions** (goals, rules of the game, legitimacy, group loyalties, views on human nature, orientation to authority).
- The whole personality cycle (childhood → adulthood) must be covered: child's image of government, regime norms, nationality, democratic orientations, political vocabulary and ideology, **elite socialisation/re-socialisation**.

Five Utilities (Functions) of Political Socialisation (Dennis 1973) 🔑

1. **Stress-absorber** — avoids/reduces stress on essential variables so the system continues.
2. **Output side** — ensures government decisions are **acceptable and binding**.
3. **Input side** — streamlines/controls the **volume and variety of demands** so the system isn't overburdened.
4. Prepares members for roles that **convert inputs into binding outputs**.
5. Generates at least a **minimal level of positive support** for basic political objects. - It is a tool for **national acculturation**. - Distinguish: **politically relevant personality development** vs **specifically political learning**, which includes learning connected with (i) the **citizen role** (partisanship, ideology, participation), (ii) the **subject role** (loyalty, authority, legitimacy), (iii) **recruitment to specialised roles** (bureaucrat, party functionary, legislator). - **Civic training** (subset of acculturation) becomes deliberate policy when instability is perceived — e.g. **USA** (doctored civic training in schools) and **Russia** (state takes responsibility for character training).

Agencies/Agents of Political Socialisation 🔑

1. **Parents/Family** — the **primary** agency; child's **first cognitive map** of the world.
2. **School system** — formal learning (Government, Civics, debates, class leadership, unionism).
3. **Peer group** — similar age/income/status/interests; friends, colleagues, clubs.

4. **Mass media and social media** — newspapers, magazines, TV, radio, internet; government often interferes in what they disseminate.
5. **Voluntary associations and interest groups** — Boys' Brigade, Girls' Guide, Boy Scouts, Red Cross; professional associations, political parties. (Also: political parties, religious organisations, government institutions.)

Political Participation

- People participate via **organised political activities** through structures like parties, elections, legislatures, executives and bureaucracies.
- Describes the **relationship between state and society**.

Six Avenues/Channels of Political Participation 🔑

1. **Elections** — the **foremost** avenue; formal decision-making by which citizens choose public office holders. Restrictions: minimum age, foreigners, mentally incompetent (Kesselman et al. 2007) despite **universal adult suffrage**.
2. **Political parties** — organisations that seek to influence policy by nominating candidates. Activities: campaigns, outreach, protest, ideology, coalitions. Electoral system (e.g. **simple plurality** vs **proportional representation**) shapes the party system. Types: **non-partisan, single-party, multiparty** (non-partisan are very few).
3. **Legislative representation** — "citizens' direct regular voice". Legislature passes laws, approves budgets, scrutinises administration. - **Bicameral:** House of Reps (by **population**) and Senate (**equal representation of states**) — Nigeria & USA. A rep serves ~**500,000–700,000** constituents. - **Britain:** House of **Commons** (elected) and House of **Lords** (unelected: hereditary peers — duke, marquis, earl, viscount, baron; Archbishops of **Canterbury and York** + **24 senior bishops**; life peers appointed by the Crown on PM's advice; Law Lords).
4. **Interest and pressure groups** — organised associations that lobby to influence policy. **Five categories** 🔑: - **Economic interests** (manufacturers, labour congress, trade unions, farmers, professionals) - **Cause groups** (religious, veterans, disabled, anti-HIV, anti-abortion) - **Public interests** (human rights, consumer protection, environment, Red Cross, Amnesty International) - **Private and public institutional interests** (universities, student unions, press, AU, EU, UN) - **Non-associational groups** (government departments, agencies, the military)
5. **Public opinion and public protests** — the collection of attitudes/beliefs held by adults on public issues; opinion expressed via mass media, protests organised by pressure groups. They're **extensions of pressure-group activity**.
6. **Public bureaucracy** — civil servants, especially **top civil servants** (an "elite corps" that watches governments come and go). Supposed to be neutral but have **conservative propensities**. - **Theory of Representative Bureaucracy:** a workforce that reflects the population (indigeneity, ethnicity, race, sex) ensures all groups' interests are considered (**Bradbury & Kellough 2014**; **Krislov 2012**).

Voting as Indicator of Political Socialisation and Participation

- Voting is the **most visible indicator** of political socialisation and participation. 🔑
- **Merkl (1988):** democracy has a **natural correction process** — dissatisfied majorities can replace rulers.
- **Voting age population** = adult group from census figures. **Eligible/registered voters** = those of voting age who registered.
- **Voter turnout** = fundamental quality of fair elections; low turnout = disengagement.

- Two key measures: % of actual voters to **registered voters**, and % to **voting age population**.

Nigerian turnout figures 🔑

Election	% of registered voters	% of voting-age population
1979 (military→civilian)	35.25%	44.83%
1983 (civilian→civilian)	38.94%	58.23%
1999 (military→civilian)	52.26%	57.36%
2003	**69.08%** (highest)	65.33%
2007	57.49%	49.65%
2011 (3rd civilian→civilian)	53.68%	48.32%

- Dec 1983 coup → military rule **1984–1999** (16 years). **1993** presidential election (presumed won by **Chief M.K.O. Abiola**) annulled by **Gen. Ibrahim Babangida**.
- Average turnout, last 5 elections up to 2016 (International IDEA 2017): **Nigeria 58.13%**, Ghana 74.98%, **South Africa 82.54% (highest)**, France 80.93%, USA 80.04% → Nigeria's is relatively **low**.

Causes of Voter/Political Apathy in Nigeria

- **Ejue & Ekanem (2011)** — three issues 🔑: 1. Importance of elections not understood/appreciated. 2. Voting-age population don't know their **rights as source of power**. 3. Voters' rights **not protected** by government.
- Underlying: flaws in political socialisation, **mass illiteracy**, **bad governance**.
- **Illiteracy:** population ~200 million, ~35% illiterate (60–100 million). Nigeria belongs to the **E-9** (Bangladesh, Brazil, China, Egypt, India, Indonesia, Mexico, Nigeria, Pakistan) — together >50% of world's illiterates (**Naboli 2013**).
- **Bad governance:** failure to convert oil wealth into development → image of **political fraud**.

Corrective Modelling — Three Perspectives 🔑

1. **Good governance perspective** — people identify with the system only when it functions in a gratifying way; elites must show competence, sincerity, transparency, accountability.
2. **Agency modelling** — deliberately structure and monitor all agents of socialisation.
3. **Content adjustment** — three areas: **(a) citizenship education, (b) value re-orientation, (c) social mobilisation.** 🔑

(a) Citizenship Education

- **Roberts (2006):** democracy can produce bad leaders where voters are illiterate or coerced by **godfathers**.
- Problems: voting by party/ethnicity, underage voting, impersonation, **vote-selling**.
- **Klusmeyer (1996):** citizenship is the **source of all governmental authority**; the social and legal link between individuals and the democratic community.
- Goal: make Nigerians **"responsible citizens"** (being a citizen ≠ being a responsible citizen).
- **Three participatory skills** 🔑: **Interacting** (communication/cooperation), **Monitoring** (tracking leaders), **Influencing** (affecting outcomes).

- **Civic dispositions:** civility, honesty, tolerance, self-restraint, compassion, trust, duty, loyalty, courage, political efficacy, concern for the common good.
- Nigerian civics curricula lack **"practicals"**.

(b) Value Re-orientation

- Values = goals people work for; determine where energy goes (**Ugwuegbu 2004**). Values are learned, become internalised, and are **dynamic** (can change). A **value system** = hierarchical rank-ordering of values.
- National value re-orientation = social movement to direct cognitive and behavioural dispositions along chosen lines.
- **History of Nigerian value re-orientation programmes** 🔑:

Year	Leader	Programme
1977	Gen. Olusegun Obasanjo	**Jaji Declaration** (first public acknowledgement; mere rhetoric)
1982	Alhaji Shehu Shagari	**National Ethical Revolution**; Ministry of National Guidance
1984	Gen. Muhammadu Buhari	**War Against Indiscipline (WAI)** — 5 phases: queue culture, work ethics, nationalism/patriotism, corruption/economic sabotage, environmental sanitation
1985	Gen. Ibrahim Babangida	**National Orientation Movement (NOM)**
1987	Babangida	**MAMSER** — Directorate for Social Mobilisation, Self-Reliance, Economic Recovery and Social Justice
1993	(Abacha era)	**National Orientation Agency (NOA)**
2004	Obasanjo (civilian)	**NEEDS** — National Economic Empowerment and Development Strategy
—	Goodluck Jonathan	No distinct programme

- **Five errors** in government handling 🔑: 1. **Inconsistent assumptions** (WAI: discipline; NOM: conditioned orientation; NOA: weakened values; NEEDS: crisis/leadership). 2. **Lack of continuity** — each regime brings its own. 3. **No empirical database** of Nigerians' values. 4. **No clear-cut ideology**. 5. **No value re-orientation for the state** and its institutions (no corporate vision/mission/values).

(c) Social Mobilisation

- Erodes old commitments so people become available for new patterns of behaviour.
- **Okafor (2003):** achieving a goal through properly articulated **group action**.
- **Akeredolu-Ale (1989):** to mobilise = commit to productive use for maximum contribution to collective goals.
- **Edward Shils (1968) — two stages** 🔑: (1) **withdrawal/disengagement** from old negative habits; (2) **induction** into new stable patterns of membership and commitment.
- MAMSER came from the **Political Bureau** recommendation; slogan: "mass mobilisation for social justice, self-reliance and economic recovery".
- **MAMSER's faulty assumptions:** that there already existed (1) a **national society**, (2) a **national elite**, (3) **national masses** with common orientation. It underestimated ethnic, religious and competitive cleavages (**Alabi 1990**).

- **Proposal:** a **direct marketing/direct advocacy** strategy (like NGOs) — segment Nigeria into problem groups and deliver tailored solutions (e.g. the HIV patient example).

Likely questions: Define political socialisation; list agents; five utilities; avenues of participation; categories of pressure groups; causes of voter apathy; turnout statistics; value re-orientation programmes and their failures; Shils's two stages; three participatory skills.

CHAPTER 4 — Law, Democracy and Good Governance in Nigeria (O.I. Adejumo)

Introduction

- **Law (Ugiade 2004):** a body of official rules and regulations (in constitutions, legislation, judicial opinions) used to govern society and control members' behaviour.
- The three concepts are interrelated; the source is the **constitution**.
- Questions raised: the **1999 Constitution** was enacted by the military via a hurriedly assembled **Constitution Debate Co-ordinating Committee** — can it truly claim "**We the People of Nigeria**"? Nigeria's **legitimacy crisis** comes from the state defaulting on its **social contract**.

What is Law?

- **Black's Law Dictionary (2004):** regime that orders human activities through systematic application of the force of politically organised society.
- **John Austin (1832)** 🔑: "a rule laid down for the guidance of an intelligent being by an intelligent being having power over him" → law is the **command of the sovereign** to the commanded.
- Law is made by authorised bodies and backed by the **coercive power of the state**.
- **Philip Cook (1986):** without law enforcement and sanctions → "a crime wave of unprecedented proportions".
- Constitution: **sovereignty belongs to the people**; **security and welfare** of the people is the **primary responsibility** of government; participation shall be ensured.
- **Duties of citizens** (Constitution): abide by the Constitution and respect the flag, anthem, pledge; enhance Nigeria's name and defend it; respect others' dignity; contribute to the community; assist in maintaining law and order; **declare income honestly and pay tax promptly**.

Functions of Law 🔑

1. **Maintenance of public order** (Lord Donalds — without law we'd bully one another).
2. **Facilitates co-operative actions** (contracts, unions, intergovernmental cooperation in a federation).
3. **Confers legitimacy** — **Malcolm Shaw (2010)**: legitimacy is a property of a rule that exerts a pull towards compliance; **Ugiagbe (2004)**: law moderates the struggle for power by setting criteria for succession.
4. **Upholds rights and duties** — right is **correlative** to duty (no duty, no right).
5. **Communicates standards** (e.g. Section 36, fair hearing). - Sources: statutes, decrees, edicts, constitutional enactments as interpreted by courts.

Law vs Morality

- Violation of law → **sanctions**; violation of morality → **no legal sanction**.
- Example: **adultery/fornication** — morally wrong but not punishable in the **South**; punishable in the **North** under the **Penal Code and Sharia**, as is drinking alcohol. 🔑

Classification of Law 🔑

- **Substantive law** — defines rights and duties and prohibits wrongs (Criminal and Penal Codes: murder, stealing, etc.).
- **Procedural law** — rules for processing civil and criminal cases (jurisdiction, form of trial, time limits). Protected by **Chapter IV**; **non-compliance can make a trial a nullity**. Found in statutes and **rules of court**.
- **Public law** — relationships within government and between government and individuals (criminal, constitutional, administrative law).
- **Private law** — relationships between persons (contract, family, equity and trusts, torts, labour, land, business law). "Persons" include corporations = **juristic persons** (can sue and be sued).
- **Civil law** — private rights enforced by civil action; originated in **ancient Rome**; no penal sanction (e.g. breach of contract → damages).
- **Criminal law** — defines crimes and punishments. Constitution: no conviction unless the offence is **defined and its penalty prescribed in a written law**. 🔑

Customary Law 🔑

- **Unwritten** traditional law of a community, recognised as binding; a **source of Nigerian law**; not uniform.
- Yoruba inheritance (intestate): **idi-igi** (distribution through **mothers/wives**) and **ori-ojori** (distribution **per head**). **Benin:** the **eldest son** inherits.
- Characteristics: 1. Validity comes from **acceptability by the community** — *Eshugbayi Eleko v. Government of Nigeria*: "it is the **assent of the native community** that gives a custom its validity"; *Owonyin v. Omotosho*: "**mirror of accepted usage**". 2. **Unwritten → flexible** — *Lewis v. Bankole* (**Osborne C.J.**): "one of the most striking features of West African native custom is its **flexibility**".
- Courts enforce it if **not repugnant to natural justice, equity and good conscience** and not incompatible with any law (the **repugnancy test**).

Constitutional Law

- Part of **public law** (citizen–state relationship).
- **Constitution:** frame/composition of government, its organs, distribution of powers and procedures.
- **Hood Phillips and Jackson** — two senses 🔑: **Abstract** = system of laws, customs and conventions defining organs of state; **Concrete** = the **document** in which the most important laws are ordained.
- A good constitution clearly sets out the structure of the **legislature, executive, judiciary → separation of powers**.
- Written constitutions are **entrenched** (amended only by special procedure); the people are the **constituent power**.

Classification of Constitutions 🔑

1. **Written vs Unwritten** - Written: Nigeria, USA, India, South Africa — a deliberate creation; **S.14(2)**: "sovereignty belongs to the people of Nigeria...". - Unwritten: **Britain, New Zealand** — an "organic growth"; UK statutes include **Magna Carta 1215, Petition of Rights 1628, Bill of Rights 1688, Act of Settlement 1700**, Parliament Acts **1911 & 1949**, Statute of Westminster 1931, etc.
2. **Rigid vs Flexible** - **Rigid:** special amendment procedure — 1999 Constitution & US Constitution. **Section 9(2):** amendment needs **two-thirds of all members of each House** of the National Assembly

and approval by the Houses of Assembly of **two-thirds of all the States**. (**Section 8** covers creation of states.) - **Flexible:** amended by ordinary legislation — **Clifford 1922, Richards 1946, Macpherson 1951** (written but flexible).

3. **Monarchical vs Republican** — monarch vs president as head; little practical significance (ceremonial in **1960** and **1963** constitutions respectively).
4. **Presidential vs Parliamentary** - **Presidential:** people elect both executive and legislature; a legislator appointed minister **forfeits** their seat (USA; Nigeria **since 1979**). - **Parliamentary:** executive (prime minister) comes from the legislature's majority party; ministers must be/become members of the legislature (UK; Nigeria under **1960 & 1963**).
5. **Federal vs Unitary** — Federal: powers shared among "equals" (USA, Nigeria, India). Unitary: hierarchical; other tiers only administrative (**Britain, The Gambia**).
6. **Confederation** — central government **weaker and subordinate** to the component units (vs federation where the centre is stronger).

Historical Development of Nigerian Constitutions 🔑

- **1914 Lugard → 1922 Clifford → 1946 Richards → 1951 Macpherson → 1954 Lyttelton** (federal; **3 regions** — North, East, West + federal territory of **Lagos**).
- **1960 Independence Constitution**; **1963 Republican Constitution** (created the **Mid-Western Region** → 4 regions).
- **1966** coup suspended the 1963 Constitution → decrees and edicts.
- **1979 Constitution — five-stage transition:** 1. **Constitution Drafting Committee (Sept 1975)** — 2 per state + learned experts. Military's commitments: federal system with rule of law and fundamental rights; truly national parties; **executive presidential system**; independent judiciary; corrective institutions (**Corrupt Practices Tribunal, Public Complaints Bureau**); restriction on state creation. 2. **State creation, April 1976** — **12 → 19 states**; common local government framework. 3. **Constituent Assembly, Aug 1977** (**Decree No. 50 of 1977**) — elected, nominated and CDC members. 4–5. **FEDECO**, lifting ban on politics, party/voter registration, elections; **handover on 1 October 1979**.
- **Features of the 1979 Constitution:**
- Federal system modelled on the **USA**; **three tiers** (federal, state, local).
- **Exclusive Legislative List** (federal only) and **Concurrent List** (federal + state); **residual matters** go to states (**Akande 1982**).
- **Chapter II – Fundamental Objectives and Directive Principles of State Policy** (first time) — **six justifications** from the CDC: imposes duties on the state; yardstick to judge governments; defines national goals; reminder of unity; removes them from political controversy; acknowledges values change.
- Objectives listed: political, economic, social, educational, foreign policy, environmental, culture, mass media obligations, national ethics, citizens' duties.
- 🔑 Chapter II is **non-justiciable** — **Section 6(6)(c)**: courts cannot enforce it.
- **S.4** legislative powers (Senate + House of Reps + State Assemblies); **S.5** executive powers (President + Governors); **S.6** judicial powers.
- **Chapter IV — Fundamental Human Rights.**

Fundamental Human Rights (Chapter IV, 1979 & 1999)

- **Ajomo (2003):** rights human beings enjoy **by virtue of their humanity**.
- US Declaration of Independence: "all men are created equal… **life, liberty and the pursuit of happiness**".

- Founded on **natural law** (a higher, unchangeable law); natural rights are personal and **cannot be waived**; formulation dates to the late 18th-century **American and French revolutions**.

Right	Section (1999)	Key points
Life	**S.33**	Not absolute — exceptions: court death sentence; reasonable force in defence of person/property, lawful arrest or preventing escape, suppressing riot/insurrection/mutiny
Dignity of human person	**S.34**	No torture, slavery or forced labour; exceptions: armed forces, police, **NYSC**, communal duties (e.g. monthly sanitation)
Personal liberty	**S.35**	Exceptions: court sentence, failure to obey a court order, reasonable suspicion of crime, minors (education/welfare), infectious disease/unsound mind/addicts/vagrants, immigration/extradition. **Right to remain silent**; told grounds of arrest **in writing within 24 hours** in a language understood; **compensation and public apology** for unlawful detention
Fair hearing	**S.36**	Widest right. Maxims 🔑: ***nemo judex in causa sua*** (no one should be a judge in their own cause); ***audi alteram partem*** (hear the other side). Ss.1–3 civil; Ss.4–12 criminal
Private & family life	**S.37**	Privacy of homes, correspondence, telephone
Thought, conscience, religion	**S.38**	Can change religion; no forced religious instruction; **no right to join a secret society**
Expression & press	**S.39**	Cf. **Art. 19 UDHR**; not a licence for false news
Peaceful assembly & association	**S.40**	Must be peaceful and for a lawful purpose
Movement	**S.41**	Restriction allowed for extradition
Freedom from discrimination	**S.42**	Community, ethnicity, origin, sex, religion, politics, **circumstances of birth**
Own immovable property	**S.43**	Anywhere in Nigeria
Compulsory acquisition	**S.44**	**Prompt compensation**, set by a court/tribunal

- **Fair hearing requirements (S.36):** public trial; independent and impartial court; **presumption of innocence**; trial within reasonable time; informed promptly of the charge; adequate time to prepare a defence; counsel of one's choice; examine witnesses; **free interpreter**; **no retroactive offence/penalty**; **no double jeopardy**; **not compelled to testify**; offence must be in written law.
- **Limitations (S.45):** rights in **ss.37–41** may be restricted for **defence, public order, public morality, public health** (must be "reasonably justifiable in a democratic society"). Rights in **ss.33 and 35** may be derogated from only in **war or a declared emergency (S.305)**. 🔑

Constitutional Powers of the People 🔑

- **Vote** in free elections; for the presidential election the **whole federation is one constituency**.

- **Recall** — voters can remove **legislators** before their term ends.
- **Impeachment** — the legislature removes the **President, Vice-President, Governor, Deputy Governor** on behalf of the people (they **cannot be recalled**).
- **Referendum petition** — voters veto unwanted laws (**not yet used in Nigeria**).

Criminal Law

- Defines crimes and punishments; includes **substantive criminal law** and **criminal procedure**.
- **Crime:** an act or omission rendering a person liable to punishment under the Criminal Code or any law.
- **Two elements** 🔑: ***actus reus*** (guilty act) + ***mens rea*** (guilty mind). Exception: **strict liability** offences (e.g. **drink driving**).
- **Classes of offences: Felony** — punishable by death or **3 years+** (murder, treason, armed robbery, terrorism, kidnapping); **Misdemeanour** — **6 months to under 3 years**; **Simple offences** — all others.

Defences to Crimes 🔑

- **Alibi** (not at the scene); **insanity**.
- **Intoxication** — generally **no defence** under the Criminal Code, except (a) **involuntary** (caused by another's malicious/negligent act), or (b) it caused insanity. Under the Penal Code: only if involuntary.
- **Immature age: under 7** = not criminally responsible; **under 12** = not responsible unless capacity to know is proved; **male under 12** presumed incapable of carnal knowledge.
- **Duress**; **mistake of fact** (e.g. taking another's coat thinking it's yours) — but **mistake/ignorance of law is no defence**.
- **Self-defence** — reasonable force, including deadly force against imminent death/serious harm.

The Police 🔑

- **S.214(1)** 1999 Constitution establishes **one Police Force**. **Police Act CAP 359 (1990), S.4** duties: prevention and detection of crime, apprehension of offenders, preservation of law and order, protection of life and property, enforcement of laws, military duties as required.
- **Arrest** needs **probable cause**; no handcuffs unless violence/escape is feared or ordered by a court.
- **Warrant of arrest:** written authority from a court; complaint **on oath**; dated, signed by a judge/magistrate; can be issued **any day including Sunday/public holidays**; **not executed in a legislative house without the President's permission**; valid until executed or cancelled.
- **Arrest without warrant:** offence in the officer's presence; reasonable suspicion of an **indictable offence**.
- **Private person may arrest** if someone: commits an indictable offence in their view; is reasonably suspected of a **felony**; is suspected of a **misdemeanour by night**. Must hand over to police **without delay**.
- Suspect must be brought to court **within 24 hours**, otherwise granted **bail** (unless a capital/serious offence). **Police bail is free**.
- **Search of a person:** a woman is searched **by a woman officer**.
- **Search of premises:** needs a **search warrant**, except customs officers (**Customs and Excise Management Act, CAP 84, s.147(1)**) and a justice of the peace (**CPC s.85**).

Democracy

- **Black's Law Dictionary:** government by the people, directly or through elected representatives.

- From Greek (**5th century BC**): ***demos*** = common people, ***kratos*** = power. 🔑
- **Two schools (Janda, Berry & Goldman 1999): Procedural** — *how* decisions are made; **Substantive** — *what* government does.
- **Procedural theory, three principles** 🔑: **universal participation**, **political equality**, **majority rule** (50% + 1).
- **Representative democracy** — direct participation is impractical; representatives must show **responsiveness**.
- **Substantive theory:** policies must guarantee **civil liberties** (e.g. **S.10 — no state religion**) and **civil rights** (S.42).
- Democracy needs at minimum **universal suffrage, political parties, regular elections**.
- **Sargent (1990) — five elements** 🔑: citizen involvement in decision making; some equality; some liberty; a system of representation; an electoral system of majority rule.

Good Governance

- **Akinseye-George (2000):** governance subject to **accountability, transparency and openness**, and **legitimate**.
- **IMF:** transparency, effective public resource management, a stable regulatory environment for the private sector.
- A purely technical (macroeconomic) notion is **dubious** without people's welfare.
- **Ten characteristics** 🔑: policies that bring happiness/good life; accountability; transparency; predictability; rational decisions; openness; free flow of information; **rule of law**; **press freedom**; **decentralisation**.
- **Social contract:** people formed the state to escape the state of nature where life was "**solitary, nasty, brutish and short**" (Hobbes); deviation = corruption.
- **Corruption** = the major obstacle. **Accountability procedure:** self-disclosure, scrutiny, ownership of decisions by the people, resources used for development, due process; the war on corruption is a **war on poverty**.

Conclusion

- Law, democracy and good governance together guarantee **freedom, liberty and dividends of democracy**; government must fulfil the social contract and be **transparent and accountable**.

Likely questions: Define law (Austin); functions of law; law vs morality; classifications of law; characteristics of customary law (with cases); classifications of constitutions; amendment procedure (S.9(2)); 1979 transition stages; non-justiciability of Chapter II (S.6(6)(c)); list fundamental rights with sections; fair hearing maxims; *actus reus/mens rea*; defences; felony vs misdemeanour; recall vs impeachment; procedural vs substantive democracy; characteristics of good governance.

CHAPTER 7 — Concept of Economics and Development (Samuel O. Orekoya)

Origin and Subject Matter

- Economics grew out of **moral philosophy, law and religion**; it became a distinct discipline with **Adam Smith's *Wealth of Nations* (1776)**. 🔑
- The consensus subject matter is **scarcity**: human **wants are unlimited**, **means/resources are limited** → **choice** → **opportunity cost**. 🔑
- Economic theory assumes **rationality** in decision making (affected by family, socio-cultural environment, peers).
- **"Means"** → production (creating goods and services); **"wants"** → consumption ("use-up" of goods).
- **Production questions:** what to produce, in what quantity, how (capital–labour mix), how to organise production.
- **Types of consumption:**
- **Intermediate (for further production)** vs **final** (ends the good's existence).
- **Durable** (cars, electronics) vs **non-durable** (food, daily needs).
- **Necessity** (crucial to survival) vs **luxury** (avoidable without threat to survival).
- 🔑 **Law of demand:** inverse relationship between price and quantity demanded (higher price → lower quantity).
- A change in **own price** → **movement along** the demand curve.
- Changes in **prices of related goods (substitutes/complements), income, taxes, tastes** → **shift of** the demand curve.
- **Distribution and exchange** = the connecting cord between production and consumption, which are separated by:
- **Location** (e.g. GSM recharge cards made in a few cities, used everywhere).
- **Time** (e.g. seasonal farm produce eaten all year).
- **Adjusting to demand:**
- **Temporary** rise (festive/dry season) → use installed capacity more (overtime).
- **Permanent** rise (population growth) → **capital formation**, i.e. build new plants.
- Economists share a **scientific methodology** and an **opportunity-cost** lens. Scope has expanded to **institutions** and **environmental externalities** (climate change, global warming).
- **Applied fields:** agricultural, engineering, monetary, health, education, environmental, international and managerial economics.

Definitions of Economics 🔑

Scholar	Definition
Adam Smith	"An inquiry into the **nature and causes of the wealth of nations**"
J.S. Mill	"The **practical science of the production and distribution of wealth**"
Alfred Marshall	"The study of **mankind in the ordinary business of life**"
Lionel Robbins (most accepted)	"A social science which studies **human behaviour as a relationship between ends and scarce means which have alternative uses**"

Scholar	Definition
Modern	How man allocates scarce resources with alternative uses to achieve given ends; "how limited resources are used to satisfy unlimited wants"; "how choices are made to cope with scarcity"

- Economics deals with: creating wealth from scarce resources; production and distribution of goods and services; behaviour and welfare of the groups involved; **trade-offs**.

Key Concepts

- **Science:** systematic study of how the world works. Process: observation of regularities → generalisations → **hypotheses** → testing against data.
- **Model:** a simplified representation of reality. 🔑
- **Positive economics** = "**what is**": testable, free of value judgements (true or false). 🔑
- **Normative economics** = "**what ought to be**": based on value judgements. 🔑
- **Social science / rationality:** human behaviour is erratic, so it is studied under ***ceteris paribus***. Individuals pick the option with the **greatest net gain**.
- **Economic person (*homo economicus*):** a theoretical abstraction of a person acting solely to maximise profit or benefit.
- **Economy:** the mechanism that organises scarce resources to produce goods and services.
- **Three economic agents** 🔑:
- **Households** — consume goods and services, **own the factors of production**, and aim to **maximise utility**.
- **Firms** — produce, buy factor services, and aim to **maximise profit**.
- **Government** — sets the rules and laws, produces to some extent, and **redistributes** resources for welfare.
- **Four factors of production: land, labour, capital, entrepreneurship**. 🔑
- **Needs** = essential for life; **wants** = desired to improve quality of life. Wants are **insatiable**.
- **Means** = resources (time, money, material).
- **Scarcity** = resources are **limited relative to wants**, even when they are plentiful. This is not the everyday sense of "rarely found". It is the **basic economic problem**. 🔑
- **Choice** = forced by scarcity; shaped by **tastes/preferences** (not measurable) and **opportunities/constraints** (measurable).
- **Opportunity cost** = the value of the **next best alternative forgone**. It is **what is not chosen** (e.g. government builds roads instead of schools). 🔑
- **Scale of preference** = a list of wants **ranked from most to least pressing**. 🔑
- **Incentives** are the most significant force in economics.
- **Economic efficiency** = maximum benefit for a given cost, or minimum cost for a benefit. Two types:
- **Productive efficiency** = maximum output from inputs, with no waste.
- **Allocative efficiency** = resources used to produce the goods of **highest value**.
- Together they answer the **what, how and for whom** questions.

Branches 🔑

- **Microeconomics:** individuals, households, firms and markets; **partial** analysis (other conditions held fixed).
- **Macroeconomics:** the economy as a whole — total output, price level, growth, inflation, exchange rates, the **business cycle** (ups and downs of total output and employment).

Economic Systems 🔑

1. **Capitalist (market economy):** free enterprise; the **price mechanism** allocates resources; minimal state role. Example: **USA**.
2. **Socialist (planned/command economy):** the state owns and controls the means of production; a **central planning authority** replaces the price mechanism. Example: the **defunct USSR**.
3. **Communist:** an **advanced stage of socialism**; means of production **owned by the masses**; no economic classes.
4. **Mixed:** both market and state; government steps in to correct **market failure**. Example: most countries, especially developing ones (**Nigeria, Ghana**).

Economic Growth vs Development 🔑

- Growth is a **subset** of development. Development presupposes growth, but growth doesn't guarantee development.
- **Economic growth (Todaro 2015):** "a **steady process** by which the **productive capacity** of the economy is increased over time to bring about **rising levels of national income**."
- **Measures of growth:**
- **GNP** = total domestic and foreign value added claimed by a country's **residents** (no deduction for depreciation).
- **GDP** = total value of final output produced **within** an economy by residents and non-residents.
- **GNP = GDP + net factor income from abroad.**
- Economists prefer **per capita** values, because if population grows faster than output, per capita income falls.
- **Economic development:**
- Traditional view: capacity to sustain annual growth of **5% or more**.
- Redefined as the **reduction/elimination of poverty, inequality and unemployment** within a growing economy.
- "A **multidimensional process** involving major changes in social structures, popular attitudes and national institutions, as well as accelerating growth, reducing inequality and eradicating poverty."
- In short: the sustained elevation of society toward a "**better or more humane life**".

Human Development Index (HDI) — UNDP 🔑

- An alternative to per capita income, focused on **enlarging people's choices**.
- **Three components:** 1. **Life expectancy at birth** 2. **Educational attainment** (mean years of schooling + adult literacy) 3. **Standard of living** (per capita income)
- **Method:** separate ends from means → translate indicators to a common denominator → weight them into a composite index.

Three Objectives of Development (Todaro) 🔑

1. Increase the availability and widen the distribution of **basic life-sustaining goods** (food, shelter, health, protection).
2. **Raise levels of living** (income, jobs, education, cultural values), which builds **self-esteem**.
3. **Expand economic and social choices**, freeing people from servitude, dependence, ignorance and misery.

Characteristics of Developing Countries 🔑

1. **Low levels of living:** low incomes, high inequality, poor health, inadequate education. - **Absolute poverty** = below the minimum income needed for basic physical needs. - **Relative poverty** = income relative to the national average.
2. **Low capital accumulation** (low savings and investment) → low productivity.
3. **Low labour productivity**, from lack of complementary inputs (**law of diminishing marginal productivity**).
4. **High population growth and dependency burden.** The labour force is ages **15–64**; children and the elderly are dependants.
5. **High unemployment and underemployment.** - **Underemployment** = working below capacity, or so unproductive that cutting their hours barely affects output. - **Open unemployment** = able and willing to work, but no jobs.
6. **Dependence on agriculture and primary product exports** (cash crops, crude oil, raw materials); small share of world trade.

Millennium Development Goals (MDGs) 🔑

- From the **UN Millennium Summit, September 2000**. **8 goals**, target year **2015**.
- Goals 1–7 are mutually reinforcing; goal 8 is the **means**.

#	Goal	Targets
1	Eradicate extreme poverty and hunger	2
2	Achieve universal primary education	1
3	Promote gender equality and empower women	1
4	Reduce child mortality	1
5	Improve maternal health	1
6	Combat HIV/AIDS, malaria and other diseases	2
7	Ensure environmental sustainability	3
8	Develop a global partnership for development	7

Sustainable Development Goals (SDGs) 🔑

- Officially "**Transforming our World**"; **17 goals, 169 targets**; **193 UN member states**; the post-2015 agenda; built on "**The Future We Want**"; target year **2030**.
- **Three dimensions** of sustainable development: **economic, social, environmental**.

#	Goal (targets)
1	End poverty in all its forms everywhere (7)
2	Zero hunger, food security, nutrition, sustainable agriculture (8)
3	Healthy lives and well-being for all ages (13)
4	Inclusive, equitable quality education and lifelong learning (10)
5	Gender equality, empower women and girls (9)
6	Clean water and sanitation (8)

#	Goal (targets)
7	Affordable, reliable, sustainable, modern energy (5)
8	Sustained growth, full employment, decent work (12)
9	Resilient infrastructure, industrialisation, innovation (8)
10	Reduce inequality within and among countries (10)
11	Inclusive, safe, resilient, sustainable cities (10)
12	Sustainable consumption and production (11)
13	Climate action, called "the single biggest threat to development" (5)
14	Life below water: oceans, seas, marine resources (10)
15	Life on land: forests, desertification, biodiversity (12)
16	Peace, justice and strong institutions (12)
17	Partnerships / means of implementation (**19**, the most targets)

Likely questions: Define economics (Robbins); scarcity, choice, opportunity cost, scale of preference; positive vs normative; micro vs macro; economic systems; growth vs development; GDP vs GNP; HDI components; characteristics of developing countries; MDGs vs SDGs (number of goals, dates).

CHAPTER 8 — Growth and Development of the Nigerian Economy (S.O. Orekoya & N. Olaseinde)

Background

- **Independence from Britain in 1960**; became a **republic in 1963**.
- **Natural resources:** crude oil, columbite, gold, silver, iron ore, marble, lead, zinc, tin, natural gas, limestone.
- At independence the economy was **underdeveloped**: low productivity, low per capita income, poor infrastructure, dominated by **agriculture** (primary sector).
- **Four National Development Plans (1962–1985) → SAP (1986) → rolling plans** (1990s) → democratic-era programmes (NEEDS, 7-Point Agenda, Transformation Agenda, ERGP).
- **Plan objectives (Anyanwu et al. 1997):** raise real income with equitable distribution; reduce unemployment; more Nigerian ownership of enterprises; use local resources; economic stability.
- **Decade by decade:**
- **1960s:** political crises, military intervention, **civil war**.
- **1970s:** oil boom, big state role in the economy.
- **1980s: oil glut** → crisis → military return and SAP.
- **1990s:** liberalisation and rolling plans.
- **Since 1999:** democratic, "paradigm" approaches.

Growth Definition

- **Simon Kuznets (1971):** growth is "the **long-term rise in capacity to supply increasingly diverse economic goods** to its population… based on **advancing technology** and the **institutional and ideological adjustments** it demands." 🔑
- Measured by GDP, GNP or GNI; **GDP growth rate** is the conventional measure.

Structure and Performance (Tables 8.1 & 8.2) 🔑

- Main sectors: **agriculture; oil and mining; manufacturing; services**.
- **Real GDP growth:**
- **Highest average: 12.6% (2001–05).**
- **Lowest: −1% (1981–85)**, from austerity after the **oil glut**.
- The first two decades grew on the **oil boom**: post-war rehabilitation and salary increases (the **Udoji awards**).
- **Agriculture:**
- No appreciable growth 1960–80.
- **All-time low of −1.5% (1976–80)**, caused by **Dutch disease** (oil boom pulled incentives away from agriculture).
- Recovered to **3.6% and 7.0%** in the two halves of the 1980s; boomed at **18.1% (2001–05)**; then fell to **6.51% (2006–10)** and **4.11% (2011–15)**.
- **Inflation:** rose to **18.1% (1976–80)**; **peaked at 42% (1991–95)**; down to single digit **9.72% (2011–15)**. The **1980s** were a recession.

- **External sector:** in the 1990s exports grew up to ~**76%** and imports ~**82%**. Exports grew **−3.96% (2011–15)**, the lowest since 1986. Imports grew faster than exports → negative trade balance → push to **diversify** away from oil.
- **Exchange rate:**
- The naira was **stronger than the dollar until 1985**.
- **₦4.5/$1** in the late 1980s (SAP); **₦125.8/$1** in 2005–08; about **₦192.44/$1 by end-2015**.
- **External reserves:** rose from **$1.9b** (late 1970s) to **$43.7b** (2005–08); grew **−1.17%** in 2011–15.
- **Debt:** about **$32b** (2000–04). The **HIPC (Heavily Indebted Poor Countries) initiative** wrote off over half → **~$6.6b** (2005–08).
- **Sectoral share of real GDP:**
- **Agriculture** was the largest contributor (**37–41%**, e.g. 41.07% in 1986–90) until 2006–15, when **services** took the lead (**32.3%** and **35.61%**). Agriculture fell to **24.94%** and **23.31%**.
- **Oil and mining:** peaked at **28.6% (2001–05)**; **11.97%** in 2011–15.
- **Manufacturing** is among the least: down from **9.17% (1981–85)** to **3.91% (2001–05)**, then up to **8.87% (2011–15)**.
- **Building and construction:** the smallest, **1.77–3.58%**.

Sectoral Analysis

Agriculture - Employs about **65% of the labour force**; closely tied to the rural sector. - **Policy objectives:** food and fibre self-sufficiency; better welfare; lower **food inflation**; diversify foreign exchange earnings through agricultural exports; raw materials for agro-industry. - **1950s–60s:** agricultural development corporations and **farm settlement schemes**. - Other tools: concessionary interest (loans capped at **6% in the 1970s, 9% in the 1980s**), specialised banks, commodity boards, input subsidies. - **Programmes and institutions** 🔑: - **Operation Feed the Nation (1976)** - **Green Revolution (1980)** - **NACB – Nigerian Agricultural Co-operative Bank (1973)** - **ACGS – Agricultural Credit Guarantee Scheme (1977)** - River Basin Authorities, **NDE**, **DFRRI** (Directorate of Foods, Roads and Rural Infrastructure), National Agricultural Land Development Authority, **FEAP** (Family Economic Advancement Programme) - Yet Nigeria still **imports rice** worth billions.

Industrial sector = manufacturing + oil, quarrying and mining + electricity. - **Manufacturing:** under **10%** of GDP; capacity utilisation about **50%**. Causes: imported inputs, low quality, little export diversification. - **Oil:** - Prominent since the **1970s boom**; the largest source of exports, foreign earnings and revenue. - **Proven reserves of ~32 billion barrels**; **6th largest producer in OPEC**; would last about **35 years** at the current rate. 🔑 - **Nigeria LNG** exports gas to Europe, especially **Italy**. - Solid minerals are underdeveloped: coal, tin, kaolin, gypsum, columbite, gold, barite, marble, tantalite, salt, sulphur. - **Electricity:** - Renamed **ECN (Electricity Corporation of Nigeria) → NEPA (National Electric Power Authority) → PHCN (Power Holding Company of Nigeria)**, then **unbundled** for privatisation. 🔑 - Generation capacity raised to **over 20,000 MW** (hydro and gas).

Federal core industrial projects 🔑 - **Refineries:** - **Four**, all government-owned: **Warri, Kaduna, and two in Port Harcourt**. - About **20 private licences** since 2000, but none built. - Nigeria still imports **over two-thirds** of its petroleum products, hence the **subsidy** debate. - **Fertiliser plants: FSFC** (Federal Super-Phosphate Fertiliser Co., **90%**) and **NAFCON** (National Fertiliser Co. of Nigeria, **10%**). They depend on imported inputs → shortages every planting season. - **Steel:** - **Three steel plants: Itakpe, Ajaokuta, Aladja**. - **Three inland rolling mills: Osogbo, Jos, Katsina**. - All are a "**colossal failure**" and currently non-active. - **Pulp and paper:** - **Nigeria Paper Mill, Jebba**; **Nigerian Newsprint Manufacturing Ltd**; **Iwopin Pulp and Paper Co. Ltd**. - Problems: poor funding, forex shortages, high costs, obsolete equipment.

National Development Plans 🔑

Plan	Objectives and key points	Why it failed / problems
1st NDP (1962–68)	Accelerate growth, raise living standards, reduce external dependence; priority on agriculture and industry. Projects: **Port Harcourt refinery, Kainji Dam, Nigerian Security Printing and Minting**	Insufficient funds (**50% expected from foreign aid** fell short); foreign advisers/inadequate manpower; federal–regional wrangling; **civil war**
2nd NDP (1970–74)	Post-war restructuring. **Five objectives:** united, strong, self-reliant nation; great dynamic economy; just and egalitarian society; land of bright and full opportunities; free and democratic society. First **oil windfall**. Reforms: **naira replaced the British pound**; **indigenisation decree**. Created River Basin Authorities, **ITF**, National Economic Advisory Council, National Bank for Agriculture, **SON**, **NNOC**	Inadequate **capacity to execute**
3rd NDP (1975–80)	Drafted in **oil boom** affluence. Added: higher per capita income, even income distribution, less unemployment, high-level manpower, **diversification**, balanced development, **indigenisation**	Overstated government capacity; negative oil shock; **external borrowing began** (start of rising debt)
4th NDP (1981–85)	Growth, price stability, social equity; priority on agriculture, education, manpower, infrastructure, housing, health	**Negative oil shocks** of the early 1980s; high cost of democratic government; **corruption**; inflation; debt; incoherent fiscal and monetary policy

Structural Adjustment Programme (SAP) 🔑

- Introduced in **July 1986** (the intro also says June 1986). Planned for **2 years (1986–88)** but lasted **until 1993**.
- **Context:** deep recession, structural imbalance, fiscal and exchange rate crises, balance-of-payments and debt problems.
- **Objectives:**
- Restructure and **diversify** the economy away from oil and imports.
- Fiscal and **balance-of-payments viability**.
- Non-inflationary growth.
- Reduce unproductive public investment and boost the **private sector**.
- **Policies:**
- **Realistic exchange rate** and **trade liberalisation** (the lead policies)
- **Deregulation** / market forces
- **Removal of subsidies**
- **Privatisation and commercialisation**, smaller public sector
- Strong **demand management**
- **Effects:** more financial institutions; the most **controversial** policy package; caused **hardship, riots and protests**.

Rolling Plans 🔑

- Shift from 5-year medium-term plans to **3-year rolling plans** in the early 1990s.

- **1990–92 (the first):** food and raw material self-sufficiency; self-reliant industry; jobs; socio-political awareness; market economy; cushion the effects of adjustment. **Failed:** relied on **deficit financing** and became a pile of uncompleted projects.
- **1993–96:** the first under the **National Planning Commission (NPC, Decree 12 of 1992)**. Addressed the naira, inflation, manufacturing and debt. **Problems:** excluded **local government estimates**; coincided with political crises and strikes.
- **Lessons:** government was the main agent (holding the "**commanding heights**"); the private sector was marginalised. Yet **over 70% of the labour force** is in the **informal (unorganised) sector**.

Democratic-Era Programmes (since 1999) 🔑

1. NEEDS (National Economic Empowerment and Development Strategy) - Focuses on **poverty reduction**, growth, human development and changing how business is done. A **paradigm shift** in planning. - Emphasises policy environment over projects; **measurable targets**; **bottom-up**, participatory; keyed to the **MDGs**. - Counterparts: **SEEDS** (states) and **LEEDS** (local governments). - **Financing:** efficient use of resources, domestic savings, **FDI, ODA, debt relief**. - **Outcomes:** more FDI and a successful **debt relief/payoff**.

2. Seven-Point Agenda (released 1 August 2007, Yar'Adua) 1. **Power and Energy** — to make Nigeria an industrial nation by 2015 2. **Food Security and Agriculture** — a 5–10 fold rise in yields 3. **Wealth Creation and Employment** — diversify away from oil 4. **Mass Transportation** — modernise the **railways** 5. **Land Reform** — release land for commercial farming 6. **Security** 7. **Qualitative and Functional Education** - Failed mainly because of its **short lifespan**.

3. Transformation Agenda (2011–2015, President Jonathan) - Aimed to fix the lack of long-term perspective and the lack of the **3Cs: continuity, consistency, commitment**. - **Projected investment ₦40.75 trillion:** ₦24.45tn public (**60%**) and ₦16.30tn private (**40%**). - **Five priorities:** 1. Harmony between fiscal and monetary policy 2. Sound macro policy with **single-digit inflation** 3. Review of the budget process (clear executive–legislature roles, prompt appropriation) 4. Review of the **revenue allocation formula** (balanced fiscal federalism) 5. Institutionalise development planning at all levels - **Critique:** the **absence of party ideology** leads to discontinuity. One party produced **three presidents** with three unrelated programmes.

4. ERGP — Economic Recovery and Growth Plan (2017–2020, Buhari/Osinbajo) - Aims to restore growth after the **recession**. Builds on the Strategic Implementation Plan. - Government's role shifts from "**omnibus provider**" to **removing bottlenecks** for innovation and markets. Leverages **STI** for a **knowledge-based economy**; aligned with the SDGs. - **Three broad objectives:** 1. **Restore growth** — macro stability (fiscal stimulus, monetary stability, external balance) and **diversification** (agriculture, energy, **MSME-led** industrialisation). 2. **Invest in our people:** - **Social inclusion**, especially the **North East and Niger Delta** - **Jobs and youth empowerment** (**N-Power**, Made-in-Nigeria, local content; ICT and creative industries) - **Human capital** (health — roll out the **NHIS** nationwide; education; STEM) 3. **Build a globally competitive economy:** - **Infrastructure** (power, roads, rail, ports, broadband; **PPP**) - **Business environment** (**PEBEC**; target **top 100** in the World Bank **Doing Business** index by 2020, **up from 169**) - **Digital-led growth** (**Smart Nigeria Digital Economy Project**, broadband, e-government, ICT clusters in SEZs) - **Five key executive priorities:** 1. Stabilise the macroeconomy 2. Agriculture and food security 3. **Energy sufficiency** (power and petroleum) 4. Transport infrastructure 5. Industrialisation through **SMEs**

Poverty and Human Development 🔑

- **Poverty** = lack of the resources needed to access basic needs, not just income: also health, education and services.

- **Three measurement approaches:** 1. **Relative poverty:**
  - Measured against the majority's living standard.
  - **Non-poor** = household per capita expenditure **above two-thirds** of the average; poor = below.
  - The poor are split into **core (extreme) poor** and **moderate poor**. 2. **Absolute poverty** (the **Food Energy Intake** measure):
  - Minimum needed for food, clothing, healthcare and shelter.
  - The book counts as poor those who can't afford **40% of 3,000 calories/day**.
  - World Bank **PPP**: living on **under US$1 per day**. 3. **Subjective poverty: self-assessment**, i.e. respondents' own opinion of whether they are poor.
- **Nigerian poverty (NBS 2012):** the poor rose from about **28% (1980) to 69% (2010)**, a ~**150% increase**.
- In 2010: non-poor **31.0%**, moderate poor **30.3%**, **extreme poor 38.7%**.
- In 1980: moderate poor 21.0%, extreme poor 6.2%.

Likely questions: Kuznets's definition of growth; Dutch disease; sector contributions; the four NDPs and why they failed; SAP objectives and policies; rolling plans; NEEDS/SEEDS/LEEDS; the 7-Point Agenda; Transformation Agenda (3Cs); ERGP objectives; refinery/steel locations; the three poverty measures.

CHAPTER 10 — Psychobiological Basis of Behaviour and Methods of Measurement in Psychology (A.O. Taiwo, S.K. Balogun, S.A. Okhakume & O. Adeshina)

Introduction

- Experience, behaviour and personal identity are **products of the brain**. "**Human behaviour comes from the brain.**" 🔑
- The psychobiological basis of behaviour = how the **brain and nervous system** generate behaviour.
- **Philosophical questions:** the mind–brain relationship; can a mind exist without a brain?
- **Practical questions:** can biology predict alcoholism, depression, schizophrenia? Can disorders like antisocial personality, insomnia, anxiety attacks and hyperkinetic disorders be prevented?

Four Types of Psychobiological Explanation 🔑

1. **Physiological** — relates an activity to how the brain and organs function, down to the **cellular/chemical** level.
2. **Ontogenetic** — how a structure or behaviour **develops** (from the genes plus environmental influence).
3. **Evolutionary** — relates behaviour to the **evolutionary history of a species**.
4. **Functional** — why a behaviour evolved / what it is for.

- The aim of **biological psychology** is to study the bodily mechanisms that make behaviour possible, and to improve health and well-being.
- **Two types of explanation:**
- Factors that **force** behaviour (instincts/reflexes): sweating when hot, **pupil constriction** in bright light, wet palms when anxious, the **knee-jerk**, salivating at unsweetened lemon juice.
- Factors that **enable** behaviour.
- **Two communication systems** in the body: the **endocrine** and **nervous** systems. 🔑

The Endocrine System 🔑

- Glands release chemicals called **hormones**. Each hormone affects only cells with **receptor sites** for it.

Gland	Hormone(s)	Function / effect of imbalance
Thyroid	Thyroxine / triiodothyronine	Raises **metabolic rate**, growth and maturation. Over-secretion → **hyperactivity**; under-secretion → **low metabolism**
Parathyroid	**Parathormone**	Raises **blood calcium**, lowers potassium. Under-secretion → poor bone formation; over-secretion → **lethargy**
Adrenal medulla	**Epinephrine and norepinephrine**	Prepares the body for **stress/emergency** (faster heartbeat, higher blood pressure, constricts gut blood vessels)
Adrenal cortex	Aldosterone, cortisol, corticosterone	Sodium metabolism, food metabolism, sexual maturity/activity
Pancreas	**Insulin / glucagon**	Lowers **blood sugar**. Over-secretion → lethargy; under-secretion → **diabetes**

Gland	Hormone(s)	Function / effect of imbalance
Anterior pituitary ("**master gland**")	**Growth hormone (somatotropic)**, thyrotropic, adrenocorticotropic, FSH, LH, **prolactin**	Growth: excess → **pituitary giant**; deficiency → **pituitary dwarfism**. Controls the thyroid, adrenal cortex and gonads. Prolactin → **mammary glands**. Synthesises **six hormones**, released under the hypothalamus's control
Posterior pituitary	**Oxytocin**, **vasopressin** (antidiuretic hormone)	An extension of the **hypothalamus**; releases **two hormones**. Oxytocin → uterine contraction in **childbirth** and **milk release**. Vasopressin → constricts blood vessels, raises blood pressure
Ovaries (female)	**Estrogen, progesterone**	Female sex characteristics
Testes (male)	**Androgens, testosterone**	Male secondary sexual characteristics (facial hair), sexual behaviour
Pineal	Melatonin (book: "melanin")	Affects the gonads/suppresses hormone output; under-secretion → decreased sexual vigour
Thymus	**Thymosin**	Supports **immune responses**

The Nervous System 🔑

- A network of specialised cells (**neurons**) that coordinate actions and transmit signals.
- **Central Nervous System (CNS)** = **brain + spinal cord**.
- **Peripheral Nervous System (PNS)** = all nerves **outside** the brain and spinal cord.
- The **brain** is the control centre for all behaviour. The human brain is larger than expected for body size among primates (**Herculano-Houzel 2009**).

Divisions of the Brain 🔑

Division	Structures	Functions
Forebrain (largest in mammals)	**Cerebral cortex**; sub-cortical: **thalamus, basal ganglia, limbic system**	Receives **sensation**; initiates **movement**; **cognition** (thinking, talking, creating, imagining)
Midbrain	Tectum, **superior and inferior colliculus**, tegmentum, **substantia nigra** (linked to **Parkinson's disease**)	Connects the other two divisions; **alerts the forebrain** to incoming sensations
Hindbrain (most posterior)	**Medulla, pons, cerebellum**	**Sleeping and waking**; **coordination of movement**; **vital reflexes** (heart rate, blood pressure, respiration)

The Cortex and Lobes 🔑

- **Cortex** = a thin layer of cells covering the forebrain; holds most of its neurons.
- **Frontal lobe** (front):
- Social-emotional behaviour and **personality** (injury → personality change).
- **Planning** and initiating **voluntary movement** (injury → **paralysis**).
- **Parietal lobe** (behind the frontal): **body sensations** (touch, pain, temperature) from the skin and joints.
- **Temporal lobe** (below the parietal): **hearing and speech**.
- **Occipital lobe** (very back): **vision**.

Hemispheres 🔑

- **Left hemisphere: verbal, mathematical, analytic**.
- **Right hemisphere: non-verbal** (can read and understand simply but **cannot speak**), **spatial, holistic**.

Brain Cells 🔑

- **Two types: neurons** and **glial cells**.
- About **100 billion neurons**; glial cells are **10–50 times more** numerous.
- **Neuron facts:**
- **Dendrites** carry signals **to** the cell body; **axons** carry signals **away**.
- Signals travel from a fraction of an inch to **over 3 feet**, at about **200 miles per hour**.
- Humans grow **virtually no new neurons after birth**, but **Princeton** researchers found **adult monkeys** keep adding new neurons.
- **Neuron structure:** 1. **Dendrites** — branch-like; **receive** signals from other neurons, muscles and sense organs. 2. **Cell body** — egg-shaped; provides fuel, makes chemicals, maintains the neuron. Its **nucleus** holds the **DNA**. 3. **Axon** — a single thread-like extension; carries signals **away** to a neighbouring neuron, organ or muscle. 4. **Terminal buttons** — bulb-like swellings at the axon tips; their **vesicles** store **neurotransmitters**. They don't physically touch the next cell. 5. **Synapse** — the tiny gap between a terminal button and the next cell. 6. **Neurotransmitters** — chemicals released into the synapse that **excite or inhibit** the next cell.
- **Signal pathway** 🔑: **Dendrites → Cell body → Axon → Terminal buttons → Neurotransmitter → next neuron/muscle/organ.**
- **Glial cells** ("supporting cells"; they lack an **action potential**):
- Provide **scaffolding** for developing neurons.
- Wrap around neurons as **insulation** against interfering signals.
- Release chemicals that influence neuron **growth and function**.
- Nervous integration comes from the nervous system **with the help of the endocrine system**.

Measurement in Psychology

- **Psychological measurement** = using specified testing procedures to evaluate people's **abilities, behaviours and personal qualities**, i.e. how they differ from or resemble others.
- **Thorndike and Hagen (1986):** measurement is "**the process of quantifying observations (or descriptions) of a quality or attribute of a thing or person**." 🔑
- **Three steps of measurement** 🔑: 1. **Identify and define** the attribute. 2. Determine **operations** that make it **manifest/perceivable**. 3. Establish procedures for **translating observations into quantitative statements**.
- **Variable** = anything that varies and can be measured (e.g. sex, socio-economic status).

Types of Variables 🔑

- **Independent variable (IV)** — **manipulated** by the experimenter; the "**cause**"; stands alone. Examples: price, deprivation, temperature, noise, brain lesions.
- **Dependent variable (DV)** — changes as a function of the IV; the "**effect**".
- **Example:** "Effect of price on consumer buying behaviour": **price = IV**, **quantity purchased = DV**.

- **Experimental group** = exposed to the IV. **Control group** = all conditions **except** the IV (Shenge and Icheke 2005).

Types of Measurement

1. **Score/numerical** — assigns a number (e.g. GES 103 scores: Ayo 60, Olabisi 55, Mojisola 65, Banke 45, Dare 56).
2. **Nominal/category** — decides which category a case belongs to (e.g. lorry driver, security officer, cashier). The numbers are **frequencies (counts)**, not scores.

Four Scales of Measurement 🔑 (very common exam question)

Scale	Key property	Example
Nominal	**Names/labels** only; the **lowest** form; numbers have no meaning (Balogun 2005)	SES: (1) high, (2) medium, (3) low as labels; sex
Ordinal	**Rank order** only (smallest → largest); also called "**rank measurement**"	1st, 2nd, 3rd
Interval	Rank + **equal distances** between values; the **most widely used** in research	4, 6, 8, 10 (gap from 4→6 = gap from 8→10)
Ratio	Interval + an **absolute (true) zero**	Distance, weight, tape measure

Methods of Data Collection 🔑

A. Observational method — systematic observation is the **starting point of any science**. 1. **Case study** — studies one individual **in great depth**; used in clinical settings to generate hypotheses. - 🔑 **Paul Broca (1824–1880)** studied the patient "**Tan**", who could only say "tan". - Broca hypothesised the **speech production centre** is in the **frontal lobe of the left hemisphere**; the **autopsy confirmed** it. 2. **Survey** — asks about behaviour, opinions, attitudes, feelings, knowledge. - Via **interviews** (face-to-face) or **questionnaires** (structured/unstructured, open/closed-ended). - Shows how strong or widespread a reaction or problem is. 3. **Naturalistic observation** — observing natural behaviour **without interfering** (e.g. watching children play through a **one-way glass**). Useful in **early stages** of research.

B. Correlational method 🔑 - **No manipulation** of the IV; assesses relationships among **naturally occurring variables** to find **predictive relationships** (used in diagnosis and job selection). - **Correlation** = two measures **covary**. - **Positive:** both rise together (e.g. **smoking ↔ lung disease**). - **Negative:** one rises as the other falls (e.g. **more TV time → lower achievement test scores**, Keith, Reimers et al. 1986). - The **correlation coefficient** gives **direction and strength**. - **Correlation does not prove causation.**

C. Experimental method 🔑 - A **controlled experiment**: observations under **systematically varied conditions**. The investigator **manipulates** the IV and observes the effect on the DV. - Uses **experimental vs control groups**. - Used to **test hypotheses** and establish **cause-and-effect**. It arose because naturalistic observation can't establish causality.

Why Psychological Measurement? 🔑

1. Formalises **prediction** of behaviour with minimum error and maximum accuracy.
2. Makes sense of **individual differences** and how traits form a unique **personality**.
3. Helps learn **how people develop** (at what age skills appear; role of sex, race, intelligence).

- **Instruments:** interviews, psychological tests, scales, inventories (intelligence, personality, creativity), **self-reports (self-inventories)**, judges' ratings.

Requirements of a Good Test 🔑

- **Reliable** — gives **consistent** results over and over.
- **Valid** — measures **what it is intended to measure**.
- **Standardised** — administered to everyone **in the same way under the same conditions**, with **norms** for comparing scores.

Standard Psychological Tests 🔑 (dates as given in the textbook)

Test	Developer / date	Measures
Stanford-Binet Intelligence Test	1960 (revision)	**Intelligence**
MMPI (Minnesota Multiphasic Personality Inventory)	**Starke Hathaway & J.R. McKinley**, University of Minnesota (book says 1930)	**Personality**
Rorschach Inkblot Test	**Hermann Rorschach** (Swiss psychiatrist), **1924** in the book (published 1921)	**Personality**
Thematic Apperception Test (TAT)	**Henry Murray** (American), **1938**	**Personality**

Statistical Techniques 🔑

1. Descriptive statistics — process raw data to **describe** a phenomenon: - **Frequency distribution** — how often each score occurs; the first step is **ranking/ordering** scores by magnitude. - **Central tendency:** - **Mode** = the most frequent score. - **Median** = the central score. - **Mean** = the "average". - **Variability:** - **Range** = highest − lowest (the simplest measure). - **Standard deviation** = the average difference of scores from the mean. - **Correlation coefficient** — the degree of relationship between two variables.

2. Inferential statistics — uses logic to **infer** from sample data to a population; assesses the **probability** of sample results (e.g. for policy decisions).

Likely questions: Four types of psychobiological explanation; endocrine glands and hormones (pituitary as master gland; insulin/diabetes; adrenaline in stress); CNS vs PNS; forebrain/midbrain/hindbrain functions; the four lobes; left vs right hemisphere; parts of a neuron and the signal pathway; glial cell functions; Thorndike & Hagen's definition; IV vs DV; four scales of measurement; case study (Broca's "Tan"); correlation types; reliability/validity/standardisation; the named tests; mean/median/mode.

CHAPTER 12 — Natural Resource Use, Exploitation and Sustainable Development (Yingigba C. Akinyemi)

Definition

- **Resource** = any part of the environment (land, water, air, minerals, forest, wildlife) created by **natural processes** with the potential to **create wealth or satisfy human needs**; "the stock that can be drawn from nature for supporting life". 🔑
- Resource use is defined by a society's **culture, level of technology and economic system**.
- Rising demand → **depletion** and environmental problems; current use determines **future availability**.
- The link between resource use, environment, poverty and **intergenerational fairness** produced the idea of **sustainable development**, mostly from the **1987 Brundtland Report**. 🔑

Classification of Resources 🔑

Basis	Types
Abundance/availability	**Renewable (flow)** — replenish quickly; inexhaustible (water, forests, air, solar). **Non-renewable (stock)** — finite, cannot be renewed (coal, petroleum, minerals)
Origin	**Biotic** — living, from the biosphere (forests, plants, animals). **Abiotic** — non-living, inorganic (air, land, water, minerals)
Geographic concentration	**Diffuse** — cover large areas (forests). **Point** — highly concentrated, small area (minerals)
Stage of development	**Potential** — known to exist but unused (e.g. possible petroleum in **Lake Chad**). **Actual** — surveyed and in use (e.g. **Niger Delta** oil and gas). **Reserve** — the part extractable with available technology. **Stock** — the part not profitably developable for lack of technology

de Zeeuw (2001) — by time needed for renewal/recycling 🔑 1. **Non-renewable, non-recyclable** — fossil fuels 2. **Non-renewable but recyclable** — minerals 3. **Quickly renewable** — fish 4. **Slowly renewable** — forests 5. **Environmental renewable** — air, water, soil (not depleted but can be **degraded by pollution**) 6. **Flow/continuous** — sunlight, wind (not reduced by use)

Resource vs Resistance; Culture 🔑

- **Resistance** = a socio-cultural or physical **obstacle** that hinders the use of a resource: culture, technology, physical barriers.
- **Culture** = beliefs (religious, political), institutions (legal, educational, government) and **technology** (equipment and skills), i.e. the **total way of life** of a people.
- Traditions, religion and **taboos** shape perception of the environment.
- **Primitive societies** with low technology have limited ability to use resources.

Types of Natural Resources

1. Mineral resources 🔑 - Elements, compounds, minerals or rocks concentrated enough to extract; **finite and non-renewable**; unevenly distributed. - The earth has **92 naturally occurring elements**, but the crust is mostly **eight**: **oxygen, silicon, aluminium, iron, calcium, sodium, magnesium, potassium**. - The ocean

floor has **manganese oxide nodules** (manganese, iron, copper, nickel, cobalt). - **Metallic minerals** (in ores with impurities): copper, lead, silicon, tin, aluminium, iron. - **Non-metallic minerals:** nitrate, sulphur, slate, building stone, graphite, quartz, coal, petroleum. - Stages: discovered → mined → transported → refined → manufactured.

2. Energy resources 🔑 - **Energy consumption is an index of economic development.** - **Renewable:** solar, wind, hydro-electricity, tides, waves, **biomass** (organic matter: crops, plants, animal waste). - **Biogas:** gases produced by **anaerobic micro-organisms** acting on domestic/agricultural waste in **digesters**. Mainly **methane**, plus CO_2, nitrogen, hydrogen and oxygen. - **Non-renewable:** fossil fuels (crude oil, natural gas, coal, oil shales, tar sands); **nuclear** (**uranium, thorium**). - **Geothermal:** heat from the earth's interior in **volcanic areas**; used in the **USSR, New Zealand, Iceland, Mexico, California**.

3. Forest resources 🔑 - Forests cover **32%** of the world's land: ~**2.5 billion ha** of closed forest and **1.2 billion ha** of open woodland and savannah. - **Wood products:** pulp, building material, firewood. - **Non-wood products:** bark dyes, fibres, gums, incense, latex, oils, tannins, fruits, nuts. - **Ecosystem services:** control of water runoff, climate regulation, soil protection, water filtration, **carbon sequestration**. - Threats: housing, urbanisation, cattle ranching.

4. Water resources 🔑 - Essential to life: dissolves nutrients, regulates body temperature, removes waste (Cunningham and Saigo 1999). - Covers **over 70%** of the earth's surface. Total water is **over 1,404 million km^3**: **97% in oceans**, **2% in polar ice**, and **1%** other (mostly **groundwater**). - Freshwater comes from **surface water** (lakes, rivers) and **groundwater**. - The global supply is **fixed and finite**. - **Causes of shortage:** - **Natural:** low rainfall, hot winds, rivers changing course. - **Human:** rising demand, urbanisation, overgrazing, poor farming, inadequate sewage.

5. Biodiversity 🔑 - **Biodiversity** = the degree of variation of life; the number and abundance of species in a region. - **Elements:** - **Genetic** diversity (gene variety within a species) - **Species** diversity (number of kinds in an ecosystem) - **Ecological/ecosystem** diversity (richness of a community: niches, trophic levels) - **Molecular** diversity - Diversity **increases from the poles towards the tropics**. **Tropical moist forests hold 50%** of the world's species; North America and Europe only **10–15%**. - **Functions:** - Food - Wood and industrial materials (fibre, oil, dyes, rubber, timber, paper) - **Traditional medicine** - **Modern medicine** (antibiotics from fungi/microbes; marine-derived drugs) - **Recreation** (bird watching, fishing, trekking) - **Indirect benefits:** carbon fixation, pollination, water cycles, groundwater recharge, soil formation, nutrient cycles, absorbing pollutants, climate regulation, aesthetic and cultural value (Rana 2007)

6. Soil resources 🔑 - To the geographer, soil is "**a living body formed by the interaction of certain forces and the work of certain processes**" (**Faniran and Ojo 1980**). - Made of rock and mineral particles, water, air, plants, animals and their remains. - Forms **extremely slowly** (thousands of years for a few cm), so although **renewable** it is effectively **irreplaceable**. - World land area is **over 13 billion ha**; **less than half** is usable for agriculture; only **~1.4 billion ha** is currently suitable for crops.

Characteristics of Resources 🔑

1. **Utility** — satisfy human needs through goods and services.
2. **Scarcity** — physical, **geopolitical** (trade barriers), economic (supply chain, market imperfections), quality.
3. **Depletion** — exhaustion of raw materials in a region; renewable resources are depleted when **extraction exceeds the renewal rate**.

Depletion and Environmental Problems

- Resources also provide a **sink function** (absorbing and recycling waste).
- Over-demand plus technology → greenhouse gases, **deforestation**, biodiversity loss, land degradation, water and air pollution → **climate change, ozone depletion, sea-level rise, famine**.

Soil degradation and erosion 🔑 - **Causes:** - **Accelerated erosion** (water, wind) — the **major** form - **Salinisation** from waterlogging - Chemical and industrial pollution - Loss of nutrients (**N, P, K**) and organic matter - Non-farm use (reservoirs, highways, airports, parking) - **Erosion** = washing or blowing away of surface soil. It is natural and slow; human removal of vegetation accelerates it, especially on **steep/long slopes**. - **Rates: 0.001 t/ha/yr** on flat vegetated land; **1–5 t/ha/yr** in mountains. About **75 billion tons** of fertile soil are lost each year (**Pimentel and Burgess 2013**). - **Effects of erosion:** - Lower **crop yield** and higher cost - Less **water-holding** capacity - **Nutrient loss**, so fertiliser is needed - **Water pollution/siltation** (costly dredging)

Deforestation 🔑 - The **permanent destruction of indigenous forests**. - World forest fell from **4,128 to 3,999 million ha (1990–2015, FAO 2015)**. - **Causes:** timber harvest, agriculture, roads, firewood. - **Effects:** species loss, **CO_2 release**, drier climate, flooding, **siltation**, poorer water quality, **desertification**.

Biodiversity loss 🔑 - **WWF 2014 (since 1970): 76% of freshwater**, **39% of marine** and **39% of terrestrial** wildlife lost. - **IUCN:** - **One-third** of known species threatened with extinction - **75%** of crop genetic diversity lost - **75%** of fisheries fully or over-exploited - **70%** of species at risk if temperature rises **over 3.5°C** - **One-third** of reef-building corals threatened - **Over 350 million** people face severe water scarcity - **By income group: +10%** in high-income countries, **−18%** in middle-income, **−58%** in low-income. - Rich countries consume more than nature can replenish: their **ecological footprint** exceeds **biocapacity**. - **Causes:** - **Habitat destruction** - **Climate change** - **Invasive species** (once natural barriers are destroyed) - **Pollution**, including **genetic pollution** (uncontrolled hybridisation, **gene swamping**) - **Overpopulation** - **Over-exploitation** (fishing, hunting, logging, illegal wildlife trade) - **Freshwater ecosystems are the most threatened.** They cover **15%** of continental surface. - Since 1970, land species fell **25%** and freshwater species **55%**. - Dams, barrages and dykes block fish migration.

Climate change 🔑 - **IPCC (1995):** climate has changed significantly over the past century, **mainly due to human activities**. - Projected global temperature rise of **1–3.5°C (2–6°F) by AD 2100**. - **Greenhouse gases: CO_2, methane, CFCs, nitrous oxide**, from fossil fuels, cement, biomass burning, landfills, pipeline leaks and soil denitrification. They **absorb infrared radiation**. - **Effects:** - Floods and droughts; biodiversity loss - Water scarcity; falling food production in the tropics - **Sea-level rise** and storm damage - **Spread of insect-borne diseases**; heat stress; weakened immune systems from UV - **Coral reef damage**

Sustainability 🔑

- **Sustainability** = improving the quality of human life **within the limits of the global environment**, without degrading it or harming others.
- **Brundtland Commission, *Our Common Future* (1987):** "**the ability to meet the needs of the present without compromising the ability of future generations to meet their own needs.**" 🔑
- **Three basic concepts** (Mensah and Castro 2004): 1. Living within the earth's **limits**. 2. Understanding the links among **economy, society and environment**. 3. **Fair distribution** of resources across present and future generations.
- **Three perspectives/pillars:**
- **Environmental** — harvest, pollution and depletion rates that can continue **indefinitely** (Melville 2010).
- **Economic** — support a defined level of production **indefinitely** (Anand and Sen 2000).

- **Social** — a social system functioning at a defined level of well-being indefinitely (Hutchins and Sutherland 2008).
- **Munasinghe (1993)** model — balance the three:
- **Economic:** growth, efficiency, stability
- **Social:** poverty, equity, participation, empowerment, culture/heritage
- **Environmental:** biodiversity/resilience, natural resources, pollution
- In business this is the **Triple Bottom Line**: **profit, planet, people**. 🔑

Measuring Sustainability 🔑

- Integrate three areas: **technical/economic** (jobs, goods), **ecological footprint** (protecting resources), and **social** (environmental justice, participation).
- **Indicators: drivers** (processes) and **outcomes** (results).
- **Approaches:** 1. **Capital approach** (UNECE 2009):
  - Balances **financial, natural, produced, human and social capital**.
  - Tracked through the **System of Integrated Environmental and Economic Accounts**.
  - **Weak sustainability:** natural and man-made capital are **substitutable**. Linked to the **Environmental Kuznets Curve**: the environment worsens in early growth, then improves past a **turning point** in per capita income.
  - **Strong sustainability:** the two are **complements, not substitutes**, so **critical environmental levels must be kept**. 2. **Planetary boundaries** — **nine earth processes** with **tipping points**, beyond which change is uncontrollable: 1. Climate change 2. Ocean acidification 3. Stratospheric ozone depletion 4. Atmospheric aerosol loading 5. Biochemical flows (**P and N cycles**) 6. Global freshwater use 7. Land-system change 8. Biodiversity loss 9. Chemical pollution 3. **Ecological footprint** — the impact of human consumption and waste, expressed as the land area needed, in "**global hectares**" (Global Footprint Network 2010). Shows trade-offs between **present and future** generations and between **brown and green** agendas.

Resource Use and Sustainable Development 🔑

- Development used to be seen narrowly as **economic growth** (capital formation from savings and investment).
- **Human development** puts **people at the centre** and enlarges their **choices**: education, health, income, decent living, freedom of expression/association/movement, social justice, non-discrimination, participation (National Human Development Report 2016). It aims to eradicate poverty and deprivation.
- **Sustainable development** = development meeting present needs without compromising the future. It must be:
- **Socially desirable**
- **Economically viable** (costs ≤ income)
- **Ecologically sustainable**
- **What it involves:**
- Using renewables without degrading them (recycling; **solar and geothermal** energy).
- Optimal use and **equitable distribution** (Knox, Agnew and McCarthy 2008).
- Education and health that build environmental awareness.
- A shift from **globalisation to "localisation"**.
- **SDGs adopted 25 September 2015: 17 goals, 169 targets**, over the next **15 years**; builds on the MDGs.

- **Technology** can be a threat (resource-using) or a solution (clean, resource-saving). Developed countries often prioritise **profit over environmental policy**.
- **Obstacles to sustainable development** 🔑: 1. Heavy reliance on **fossil fuels** (inequality, global warming); renewables pursued "**half-heartedly**" because of powerful fossil-fuel interests. 2. **Population growth** in less developed countries (hunger, malnutrition). 3. **Inadequate institutional frameworks**.

Revision Points (from the chapter)

- A resource is part of the environment used to satisfy human needs.
- Classified by **abundance, origin, geographic concentration, stage of development**.
- Sustainability has **social/political, environmental and economic** perspectives.
- Environmental problems of unsustainable use: **deforestation, biodiversity loss, global warming, climate change**.

Likely questions: Define resource; classifications (renewable/non-renewable, biotic/abiotic, potential/actual/reserve/stock); de Zeeuw's six classes; resource vs resistance; the 8 crustal elements; biogas; water distribution (97/2/1); levels of biodiversity and its functions; effects of erosion and deforestation; Brundtland definition; three pillars and the Triple Bottom Line; weak vs strong sustainability; Environmental Kuznets Curve; planetary boundaries; ecological footprint; obstacles to sustainable development.

CHAPTER 13 — Current Discourse in Peace and Conflict Studies (A.L. Alabi, T.A. Joshua & Ojuge Folorunsho)

Introduction

- Peace and conflict studies is **interdisciplinary**: sociology, political science, philosophy, history, psychology, social anthropology, geography, economics and religious studies. 🔑

Origins and Development 🔑

- The field was born **simultaneously but separately** as two strands:
- **"Peace research"** — focused on the **prevention of conflicts and maintenance of peace**.
- **"Conflict studies"** — focused on **settling disputes and sustaining peace**.

Peace research - Origins (**Robben and Ferrandiz 2007**): the moral reflections of **Woodrow Wilson, Georges Clemenceau and David Lloyd George** on the costs of **World War I**, where about **8 million soldiers died** and **2 million went missing**. - This led to the **League of Nations (1919)**. - Peace research developed in **Scandinavian universities in the 1950s**. - In the **1950s** came calls for the systematic study of peace as a **separate discipline** (Gleditsch et al. 2014), distinct from **war studies**, which military scholars dominated. - It has since broadened to human rights, **human security**, **transitional justice**, violence prevention, peace building, reconciliation, identity formation and cultural trauma.

Conflict studies - Started in **North America in the 1950s–60s**, at the height of the **Cold War** and the **nuclear arms race**. - **1957:** *Journal of Conflict Resolution* founded. - **1959: Centre for Conflict Resolution, University of Michigan**. - Treated conflict as a **general phenomenon** (international, domestic, industrial, community, family, interpersonal), borrowing from **industrial relations** and **community mediation**. - **By the 1980s** it was affecting real conflicts: - **South Africa** — the **Centre for Intergroup Studies** worked on the apartheid confrontation. - **Middle East** — Israel–Arab negotiators trained through **problem-solving workshops**. - **Africa and South-East Asia** — humanitarian and development agencies built conflict resolution into their work.

Merger of ideas (after the Cold War) - After the **dissolution of the Soviet Union**, attention shifted to **internal conflicts**: ethnic wars, secessionist movements, power struggles. These brought **mercenaries** and militias and diverted aid. - This led to cross-fertilisation between peace research and conflict studies. - **International bodies** set up peace building and conflict resolution mechanisms: **OSCE**, **OAU**, NGOs (**Jimmy Carter Centre**, **Nyerere Foundation**), the **IMF and World Bank**. - **Preventing violent conflict** became a central goal of the new millennium.

The Concept of Conflict 🔑

- Conflict is a **universal feature of human society**. It comes from economic differentiation, social change, cultural formation, psychological development and political organisation.
- **Lewis Coser (1956):** conflict is "**the struggle over values or claims to status, power and scarce resources, in which the aims of the groups or individuals are to neutralise, injure or eliminate rivals**." 🔑
- It needs **two or more parties** with **incompatible interests or goals** (real or perceived) who show **hostile attitudes or damaging actions**.

- **Sources of conflicting interests** (Payson Conflict Group 2001):
- Poor access to and distribution of resources (territory, money, energy, food)
- Lack of control over political power and participation
- **Loss of identity**
- **Values** (government, religion, ideology)
- Conflicts are **dynamic** (they escalate and de-escalate). **Third parties** may become parties to the conflict.

Types of Conflict 🔑

- **General types:** pseudo conflict, conflict of interests, value conflict, goal conflict, conflict of perception, role conflict, resource conflict.
- **Wallensteen (2002) — three types in international relations:** 1. **Inter-state conflict** — between nation-states. 2. **Internal conflict** — civil crises, ethnic wars. 3. **State-formation conflict** — a variant of internal conflict: anti-colonial struggles, secession and autonomy movements, territorial disputes, battles for control of government.
- Other classifications of internal conflict: **intra-group, inter-group, national**.
- **Global conflicts:** non-state groups versus international and regional organisations.

Theories on the Causes of Conflict (McCandless 2007) 🔑

1. Social and psychological matters (agency) — causes lie in individual or collective human behaviour; perceptions and misperceptions: - Aggression is **innate/biologically programmed**. - The **"self" vs "other"** distinction creates a psychological **need for enemies** (the **psychoanalytical** perspective). - **Group formation**: images, misperceptions, **stereotyping, dehumanisation** (the **psycho-social** perspective). - In the 1990s, "**ethnic conflict**" and "**identity conflict**" became common labels for African conflicts.

2. Structural and political economy — society's own organisation creates conflict: - **Johan Galtung's "structural violence"**: unequal social structures produce **unequal access to resources**. 🔑 - **International political economy** and **war economy** literature: global processes cause systemic conflict; asks **who benefits from war** (Duffield, Keen, Goodhand and Hulme).

Concepts Balancing the Two Perspectives 🔑

(a) Protracted Social Conflict (PSC) — Edward Azar - Rooted in **religious, cultural or ethnic communal identity**. - Caused by **dissatisfied basic developmental needs**: security, communal recognition, distributive justice. - **Four causes:** 1. **Communal content** — politicised identity groups. 2. **Deprivation of human needs** — physical security, access to institutions, acceptance of identity. 3. **The state and governance** — whether needs are met or denied. 4. **International linkages** — economic dependency; **patron–client** military relations. - Common in **developing countries** with extreme poverty. Rapid growth-oriented strategies can worsen inequality (**Azar 1990**).

(b) Complex Political Emergencies (CPE) — Jonathan Goodhand and David Hulme - **Five features:** 1. Conflicts **within and across state boundaries** (a hybrid form). 2. **Political origins** — competition for power and scarce resources. 3. **Protracted** duration. 4. **Social cleavages** across political, economic, social and cultural lines. 5. **Predatory social formations**, often **ethno-nationalist**, manipulated by **conflict entrepreneurs** and political opportunists.

The Concept of Peace 🔑

- **Negative peace** = **absence of war/conflict**. It is no different from "non-war", a tense "**yet-to-be-violent**" situation (Miller 2005); the mere absence of violence despite antagonistic goals (**Galtung 1990**).
- **Positive peace** = a political condition ensuring **justice and social stability** through formal and informal institutions, practices and norms.
- **Four concepts of peace** (Payson Conflict Group 2001): 1. Peace as **harmony** (absence of conflict) 2. Peace as **order** (stability, peace through strength) 3. Peace as **justice** (absence of domination and poverty) 4. Peace as **conflict management** (a **process**, not an end)
- **Six conditions for positive peace** (Miller 2005): 1. **Balance of political power** among groups 2. **Legitimacy** of decision makers (transparency, accountability) 3. Recognised **inter-dependent relationships** and cooperation 4. **Reliable, trusted institutions** for resolving conflict 5. A sense of **equality and respect** 6. **Mutual understanding** of rights, interests and intents
- An **absence of conflict is impossible** in human society; peace is "notoriously elusive".

Key Terms in Peace Studies 🔑

- **Peace building** — measures to **consolidate peaceful relations** and prevent tensions; promotes **human security**; strengthens society's capacity to manage conflict **without violence**.
- **Peace enforcement** — **military force** or its threat, usually under international authorisation (**Chapter VII of the UN Charter**), e.g. **Korea 1950–53**.
- Can happen **without the consent** of the warring parties.
- Includes sanctions, arms embargoes, air/missile strikes, rapid deployment, disarming armed groups.
- **Peace operations** — the umbrella term:
- **Diplomatic** activities: preventive diplomacy, peacemaking, peace building.
- **Military** activities: peacekeeping and peace enforcement.
- **Peacekeeping operations** — resolve or prevent escalation, halt fighting, uphold order, humanitarian action, restore institutions. Distinctive feature: conducted under a **UN or regional organisation mandate**.

Key Terms in Conflict Resolution 🔑

- **Conflict resolution** — **transforms conflicts in an enduring manner** rather than just settling or suppressing them.
- Addresses **basic human needs** and builds sustainable relationships (equality, multiculturalism, federalism).
- Increases cooperation, reconciliation, institution building; prevents re-escalation.
- **PCIAS (Peace and Conflict Impact Assessment System)** — estimates the negative effects of escalation; **early warning** should also show the cost of a "wait-and-see" policy.
- **Conflict mitigation/management** — **contain and reduce violence** and move parties toward settlement.
- **Conflict prevention** — actions, policies and institutions that keep parties from using force; also preventing **recurrence** after conflict.
- **Post-conflict peace building** — multi-dimensional programmes addressing **root causes** to prevent **relapse**.
- **Preventive diplomacy** — skilled assistance (**good offices, mediation**) to resolve disputes **before they erupt** into armed conflict; also containing the spread of conflict.

- **Early warning** — systematic **collection and analysis of information** from crisis areas to **anticipate escalation** and present options to decision makers.
- **Interactive conflict resolution** — small-group **problem-solving discussions** between **unofficial representatives**, facilitated by an impartial third party.
- **Preventive (pre-conflict) peace building** — using **relief and development resources** to strengthen conflict-prone societies' capacity for non-violent resolution.
- **Preventive strategies — three principles:** 1. **Early reaction**, which needs early detection and analysis 2. A **comprehensive, balanced approach** 3. An **extended effort on root causes**
- Two sub-types: **operational prevention** (immediate crisis) and **structural prevention** (so crises don't arise or recur).

Other Common Terms 🔑

- **Mediation** — negotiation helped by an **impartial, neutral third party** who has **no authority to decide** (unlike judges/arbitrators).
- **Four stages:** (1) create the forum; (2) gather and share information; (3) problem-solving bargaining; (4) decision making.
- **Power mediation** — mediation **plus leverage** (promised **rewards** or threatened **punishment**).
- **Pure mediation** — facilitation through **reasoning, persuasion, information control and suggestion** only.
- **Reconciliation** — addressing the conditions behind conflict and turning **adversarial relationships into harmonious ones**; restores nationhood and **social capital**.
- **Reconstruction** — rebuilding physical infrastructure and the economy; post-conflict re-building:
- **De-mining**, **disarmament**, **reintegration of combatants**
- Return of refugees, resettlement of **IDPs**
- Reviving politics and the economy, supervised elections
- **Capacity building** — developing individual and collective abilities, and institutions, to turn conflict into a **positive, constructive force**.
- **Compromise** — a settlement where **each party makes concessions**.
- **Conciliation** — two sides **voluntarily** agree to a compromise. Unlike **arbitration**, the solution is **not binding/compelled**.
- **Conciliator** — a **trusted third party** who provides a **communication link**, lowers tension and moves the parties toward direct negotiation.

Case Study: Niger Delta Militancy and Federal Response 🔑

- The Niger Delta provides **80% of national wealth** (oil).
- **Niger Delta states (9): Abia, Akwa Ibom, Bayelsa, Cross River, Delta, Edo, Imo, Ondo, Rivers**.
- **Grievances:** extreme poverty, environmental degradation, unemployment, water pollution, **government neglect** → agitation for a bigger oil share and **resource control** → youth **militancy** and criminality.
- **Classified as a Protracted Social Conflict (PSC).**
- **Explained by the frustration–aggression theory** 🔑:
- Proposed by **John Dollard and associates (1938)**: aggression **always presupposes frustration**, and frustration leads to aggression.
- When people are blocked from their goals, frustration turns to aggression once **triggered**. It is aimed at the cause, or **displaced** onto another target (**Berkowitz 1980**).

Four categories of federal response 🔑 1. **Military/police deployment ("repression")** - Pro-active or pre-emptive deterrence. - **Criticised** for **militarising** the region and **escalating** militancy. 2. **Preventive peace building: constitutional/institutional bodies**

Year	Body	Legal basis / notes
June 1959	**NDDB** — Niger Delta Development Board	Order-in-Council; initially for 10 years; **S.14 Nigerian (Constitution) Order-in-Council 1960**; **NDDB Act 1961**. **Failed**
Aug 1976	**NDBDA** — Niger Delta Basin Development Authority	**Decree 37 of 1976**; to tackle floods, pollution, erosion. **Failed**: government admitted oil caused the problems but **would not interfere with the oil industry**
1992	**OMPADEC** — Oil Mineral Producing Areas Development Commission	**Decree 23 of 1992** (Babangida); got **3% of the Federation Account** revenue. An improvement because it addressed real issues with statutory funds
1999	**NDDC** — Niger Delta Development Commission	**NDDC Act 1999, S.7(1)**. Covered all issues **except** the demand for **≥50% derivation** and resource control. Undermined by leadership struggles and funding seen as "**tokenism**" (**Briggs 2007**)

3. **Post-conflict peace building: fiscal redistribution (derivation)** - Derivation fell from **50% (1951)** to **1.5%** (Buhari regime). - Raised to **3% in June 1992** (Babangida). - **Ecological fund** raised from **1% to 2%** of the Federation Account. - **1991:** NNPC and joint-venture oil firms must give **3% of capital investment** to host-community development. - **13% derivation** (set under the **Abacha** regime; **S.162(2), 1999 Constitution**, in force **29 May 1999**).
4. **Amnesty (preventive diplomacy)** — a political "**soft landing**" instead of a full military siege. - **1967: Gen. Yakubu Gowon** pardoned **Isaac Adaka Boro** and his **Niger Delta Volunteer Force (NDVF)** comrades, sentenced to death for their **February 1966** insurgency. - **October 2004: Obasanjo** signed a peace accord with **Asari Dokubo** (**NDPVF**, Niger Delta People's Volunteer Force) and **Tom Ateke** (**NDV**, "Niger Delta Volunteers" in the book; commonly known as Niger Delta Vigilante).
    - Terms: general pardon, disarmament and demobilisation; the government promised resettlement and **4,000 jobs** (**capacity building**).
    - Over **5,000 weapons** were surrendered (Oct 2004 – June 2005), but the government **failed to deliver** resettlement and jobs.
    - Asari Dokubo was **arrested in September 2005**. The militants regrouped as **MEND** (**Movement for the Emancipation of the Niger Delta**): sabotage, oil theft, pipeline destruction, guerrilla warfare, **kidnapping**.
    - **29 May 2007: President Umaru Musa Yar'Adua** took office, with **Goodluck Jonathan** (a Niger Delta indigene) as Vice-President.
    - He set up a **45-man Technical Committee** to harmonise all reports, from the **1957 Sir Henry Willink Commission** to the **2007 Peace and Conflict Resolution Committee**.
    - **25 June 2009: amnesty declared**, with a deadline of **4 October 2009** for disarmament.
    - About **15,000 militants** accepted → **relative peace**.

Conclusion of the case study - The Niger Delta question is **not permanently resolved**. - Granting full **resource control** would tilt economic power to the region and risk the **disintegration** of Nigeria. The conflict has become **intractable**. - So the best achievable is **efficient conflict management**, not permanent resolution.

Likely questions: Origins of peace research vs conflict studies; Coser's definition; Wallensteen's types; agency vs structural theories (Galtung's structural violence); PSC (Azar) and CPE (Goodhand and Hulme);

negative vs positive peace; conditions for positive peace; peacekeeping vs peace enforcement vs peace building; mediation stages; power vs pure mediation; conciliation vs arbitration; Niger Delta bodies (NDDB, NDBDA, OMPADEC, NDDC) with dates; derivation percentages; frustration–aggression theory; the 2009 amnesty.

CHAPTER 14 — Information and Communications Technology and Social Sciences in the 21st Century (A.S. Jegede)

Introduction

- ICT is part of daily life and important in **teaching and learning**. Teaching and learning are **relationship issues**, so ICT belongs in the social sciences.
- **All disciplines rest on the oars of the social sciences**, because no discipline is independent of human beings.

Learning outcomes (match the SAQs): 1. Difference between natural and social sciences 2. What ICT is 3. Relevance of ICT to the social sciences 4. Role of ICT in teaching and learning the social sciences

Science, Natural Sciences and Social Sciences 🔑

- **Science** = the application of **systematic methods** to obtain knowledge, and the knowledge so obtained. Ancient explanations mixed observation with **magic and superstition**.
- **Natural sciences:** explain and predict events in the **natural environment**.
- Main fields: **biology** (botany, zoology), **geology** (mineralogy, geomorphology), **chemistry** (organic, inorganic), **physics** (biophysics, quantum mechanics).
- Each studies a "**slice**" of nature.
- **Social sciences:** examine **human relationships**; they try to **objectively understand the social world**. Its ordered relationships are not obvious and must be revealed by **repeated observation**.
- Fields: **anthropology, economics, political science, psychology, sociology**.
- **SAQ 1.1 answer:** natural sciences explain and predict events in the natural environment objectively; social sciences examine human relationships and try to objectively understand the social world.

What is ICT? 🔑

- The term **ICT replaced "IT" in the early 1990s**, in recognition of the computer's **communicating abilities** (**Adesoki and Fatoki 2013**).
- **Clarke (2006):** ICT covers "**a whole range of applications, techniques and systems** such as **computers, communications equipment and the services associated with them**." (This is the **SAQ 1.2 answer**.)
- ICT is also a **skill for life**, like literacy: needed to live confidently and independently in modern society.

Three Positions of ICT in Education 🔑

1. **Learning about ICT** — ICT is the **subject** of learning in the curriculum.
2. **Learning with ICT** — ICT is a **medium to facilitate instruction**.
3. **Learning through ICT** — ICT is **integrated as an essential tool**, so the course **can no longer be taught without it**.

Relevance of ICT to the Social Sciences 🔑

- ICT is now a **learning tool**, a **platform of interaction** between groups, and a form of communication that is fast becoming a **universal language**.
- Computer knowledge helps manpower in the **production and distribution** of goods and services. Employability depends on computer skills (e.g. **banking**).
- **Political science:** computers **analyse voting behaviour** and enable **prediction via pre-election surveys**. The **card reader** in Nigerian elections is ICT-based; advanced democracies show results as votes are cast.
- **SAQ 1.3 answers:** (1) ICT helps our understanding of the social sciences; (2) computer knowledge helps manpower in producing and distributing goods and services.

ICT Literacy 🔑

- **Alvin Toffler:** "**The illiterate of the 21st century will not be those who cannot read and write, but those who cannot learn, unlearn, and relearn.**" 🔑
- **Haddad and Jurich (2002) — four basic issues** in the use of ICT in education: **effectiveness, cost, equity (equality), sustainability**. 🔑 ICTs (especially **computers and the internet**) can improve the efficiency and effectiveness of education at all levels, formal and non-formal.

Roles of ICT in Teaching and Learning Social Sciences 🔑

- Affects **three areas:** the **teacher**, the **learner**, and the **image of social science** as a discipline.
- **Shift in curricula:** from conventional, **content-centred** teaching (lectures and tutorials, Kamal and Banu 2010) to **competency/performance-based** curricula (Stephenson 2001).
- **Competency-based curricula require:**
- Access to varied information sources, forms and types
- **Student-centred** settings based on inquiry
- **Problem-centred, inquiry-based** activities
- Authentic settings and examples
- **Teachers as coaches and mentors**, not just content experts

1. ICT and information literacy skills - **Information literacy** = "**the capacity to identify an issue and then to identify, locate and evaluate relevant information in order to engage with it or to solve a problem arising from it**" (**McCausland, Wache and Berk 1999**). 🔑 - Traditional **generic skills:** formal reasoning, problem solving, communication, negotiation, time and project management, collaboration and teamwork. Information literacy has been **added** to this pool.

2. ICT and students' independent learning - Move from **teacher-centred** to **student-centred** delivery; students take **responsibility for their own learning**. - Learning used to be by **transmission**. Now it is **problem-based learning** and the **Web as an information source**. - ICT is a **catalyst for change**; computers become **information sources and cognitive tools** (**Jonassen and Reeves 1996**).

3. ICT and alternative learning theories — Constructivism 🔑 - Today's dominant theories are **constructivist** (**Duffy and Cunningham 1996**): learning is the **active construction of knowledge** from various perspectives in meaningful contexts. - **Social interaction** plays a critical role in learning. - Old model: **transmission** of knowledge, then interaction to consolidate it. New model: instruction **supports knowledge construction**. - Learning = **construction of meaning**, not **memorisation of facts** (Lebow 1993).

- **SAQ 1.4 answers (three roles):** (1) information literacy skills; (2) students' independent learning; (3) social science research.

Factors Favouring the Use of ICT 🔑

1. **Availability of funds** (Nwankwoala 2015).
2. **Availability of infrastructure** — equipment, multimedia, **adequate power supply** (Kessy, Kaemba and Gachoka 2006).
3. **Positive attitude to technological change** — teachers' attitudes are **major predictors** of use (**Almusalam 2001**); positive attitude plus **constructivist beliefs** (Sang, Valcke et al. 2010).
4. **Competency in ICT operation** — **Berner (2003)** tested **seven variables**; **belief in one's own computer competence** was the **greatest predictor** of classroom computer use.
5. **Personal characteristics** (age, years of experience) — **younger, less experienced teachers** use computers more (US Department of Education 2000). In Nigeria, some **old lecturers feel ICT is for the younger generation** (Nwankwoala 2015).

Factors Hindering the Use of ICT 🔑

1. **Inadequate funding** — low government funding of Nigerian universities; the **internet is expensive to maintain**.
2. **Inadequate infrastructure:** - Computers are shared and must be **booked in advance**. - **Obsolete/poor-quality** resources; no **broadband**. - **Epileptic power supply**.
3. **Inadequate professional training** — few ICT technical staff to train lecturers (Mathipa and Mukhari 2014).
4. **Negative attitude to change** — preference for the **status quo** and face-to-face, teacher-centred teaching, which gives a "**sense of power**" (Makgato 2012). Some see ICT as a **waste of time** and skip workshops.
5. **Lack of technological know-how:** - **Pelgrum (2001):** the success of innovations depends on **teachers' skills and knowledge**. - Lack of knowledge → **lack of confidence** → **anxiety and fear of failure**. - Students may also lack skills because of scarce resources or **other priorities**.

Advantages of ICT in Social Sciences 🔑

- ICT has made the world a **global village** (**Bhatti 2013**).
- **Fung (2013):** ICT affects **three phases of social science research**: **pre-data analysis, data analysis, post-data analysis**. 🔑

In research: - **Pre-data analysis / literature review:** - Articles available online; **online libraries** with millions of digitised journals, books and theses; access **any time**. - **Safe storage**: can't be destroyed, stolen or misfiled. - **Exchange of ideas** across locations and disciplines. - **Mendeley** — software to **manage/track literature** (references). 🔑 - **Data analysis:** - **Qualitative: Dragon NaturallySpeaking** (transcribes recorded interviews); **NVivo** and **ATLAS.ti** (qualitative analysis). 🔑 - **Quantitative: SPSS** (Statistical Package for the Social Sciences); no manual formulas, but you must know what results you need. 🔑 - **Post-data analysis:** - **Plagiarism detection** software. - **Online manuscript submission**; easy communication with **peer reviewers, editors and publishers**.

In teaching: - Learning is **no longer limited by time and place** (Talebian, Mohammadi and Rezvanfar 2014). - Collaboration; online resources; **flexibility** and **student-centredness** (CERI/OECD 2008); connects learning

to the **real world** and builds confidence. - Improves **quality of education**; **wider reach** via chat rooms and **video conferencing**. - Gives lecturers more time for **personal development**.

Disadvantages of ICT 🔑

- **Research:** online resources (especially online libraries) need **continual updating**.
- **Teaching:** 1. Online resources may be **inaccurate** or not aligned with the course. 2. Hard to run and assess **practical sessions** online. 3. **Limits face-to-face interaction**. 4. Hard to **measure students' progression**. 5. Hard to **authenticate** that the registered student is the one participating. 6. **Internet access** may not be available to all students.

Chapter Summary

- There is a difference between natural and social sciences.
- ICT covers a **wide range of applications**.
- ICT is relevant to the social sciences.
- ICT plays a key role in teaching and learning the social sciences.
- **Revision questions given in the book:** 1. Identify factors **favouring and hindering** ICT use. 2. Identify **five importances** of ICT to the social sciences: ICT literacy; understanding basic issues in its use; teaching and learning; information literacy; independent learning; alternative learning theories. 3. Discuss the **advantages and disadvantages** of ICT in the social sciences.

Likely questions: Natural vs social sciences; define ICT (Clarke); when ICT replaced IT; the three positions of ICT in education; Toffler quote; Haddad and Jurich's four issues; definition of information literacy; constructivism; factors favouring and hindering ICT; Fung's three research phases; named software (Mendeley, Dragon NaturallySpeaking, NVivo, ATLAS.ti, SPSS); advantages and disadvantages.

QUICK-REVISION CHEAT SHEET (most-tested facts)

Topic	Fact
Social science	Product of the **18th century**; *ceteris paribus* = "all things being equal"
IBSSS	Started with **Economics, 1958**; Geography 1948 (joined 1967); **6 departments**
Political socialisation	Induction into the **political culture** (Almond); **parents/family = primary agent**
Highest Nigerian turnout	**2003: 69.08%** of registered voters
Value re-orientation	Jaji 1977 → Ethical Revolution 1982 → **WAI 1984** → NOM 1985 → **MAMSER 1987** → NOA 1993 → NEEDS 2004
Shils	Social mobilisation: (1) **disengagement**, (2) **induction**
Law (Austin)	"Command of the sovereign"
Customary law cases	*Eleko v. Govt of Nigeria* (assent of community); *Owonyin v. Omotosho* (mirror of accepted usage); *Lewis v. Bankole* (flexibility)
Amendment	**S.9(2):** ⅔ of each House of the National Assembly + ⅔ of State Assemblies
Chapter II	Fundamental Objectives — **non-justiciable, S.6(6)(c)**
Fair hearing	**S.36**: *nemo judex in causa sua*; *audi alteram partem*
Crime elements	*Actus reus* + *mens rea* (exception: strict liability)
Felony / misdemeanour	**≥3 yrs or death** / **6 months to <3 yrs**
Criminal age	**<7** not liable; **<12** liable only if capacity is proved
Democracy	*Demos* (people) + *kratos* (power); principles: universal participation, political equality, majority rule
Economics definition	**Robbins**: ends and scarce means with alternative uses
Opportunity cost	The **next best alternative forgone**
HDI	Life expectancy + education + per capita income (**UNDP**)
MDGs / SDGs	**8 goals, 2000–2015** / **17 goals, 169 targets, 2015–2030**
Growth (Kuznets)	Long-term rise in capacity to supply diverse goods
Dutch disease	Agriculture **−1.5% in 1976–80** due to the oil boom
SAP	**1986–1993** (planned 1986–88)
NPC	**Decree 12 of 1992**
Refineries	**Warri, Kaduna, Port Harcourt ×2**
Steel plants	**Ajaokuta, Aladja, Itakpe**; rolling mills **Osogbo, Jos, Katsina**
Brain	~**100 billion neurons**; glia **10–50×** more
Master gland	**Pituitary**
Lobes	Frontal (planning/personality), Parietal (touch), Temporal (hearing/speech), Occipital (vision)
Scales	**N**ominal, **O**rdinal, **I**nterval, **R**atio ("NOIR")

Topic	Fact
Broca	Patient "**Tan**" → speech centre in the **left frontal lobe**
Brundtland 1987	Meet present needs without compromising future generations
Water	**97% oceans, 2% ice, 1%** other
Forest cover	**32%** of land; fell from 4,128 to 3,999 million ha (1990–2015)
Triple Bottom Line	**People, Planet, Profit**
Conflict (Coser 1956)	Struggle over values, status, power, scarce resources
Structural violence	**Galtung**
PSC / CPE	**Azar** / **Goodhand and Hulme**
Frustration–aggression	**Dollard et al. 1938**
Niger Delta bodies	**NDDB 1959/61 → NDBDA 1976 → OMPADEC 1992 → NDDC 1999**
Derivation	50% (1951) → 1.5% → 3% (1992) → **13% (1999 Constitution, S.162(2))**
Amnesty	**25 June 2009** (Yar'Adua); deadline **4 Oct 2009**; ~**15,000** militants
ICT	Replaced "IT" in the **early 1990s**
Toffler	Illiterate = cannot "learn, unlearn and relearn"
Research software	**Mendeley** (references), **Dragon** (transcription), **NVivo/ATLAS.ti** (qualitative), **SPSS** (quantitative)
